<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☒ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is present.

Subregion (LRR or MLRA): P 136 Lat: 36.58473207 Long: -79.59027489 Datum: NAD 83  
Soil Map Unit Name: 21D - Poplar Forest fine sandy loam, 15 to 25 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No _____	Is the Sampled Area within a Wetland? Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>	
Wetland Hydrology Present? Yes _____ No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PFO W-B025. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project NC City/County: Pittsylvania County Sampling Date: 2024-06-11  
Applicant/Owner: Mountain Valley Pipeline LLC State: Virginia Sampling Point: SP-B054  
Investigator(s): ES, LC, PM Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Slope Local relief (concave, convex, none): Convex Slope (%): 0-1  
Subregion (LRR or MLRA): P 136 Lat: 36.58386878 Long: -79.59130125 Datum: NAD 83  
Soil Map Unit Name: 21D - Poplar Forest fine sandy loam, 15 to 25 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No _____	Is the Sampled Area within a Wetland? Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>	
Wetland Hydrology Present? Yes _____ No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PFO W-B026. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project NC City/County: Pittsylvania County Sampling Date: 2024-06-13  
Applicant/Owner: Mountain Valley Pipeline LLC State: Virginia Sampling Point: SP-B071  
Investigator(s): ES, LC, PM Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.582757 Long: -79.592039 Datum: NAD 83  
Soil Map Unit Name: 5C3 - Clifford sandy clay loam, 7 to 15 percent slopes, severely eroded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within PFO W-B035. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if observed):**

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes \_\_\_\_\_ No ☒

Remarks:

No indicators are present.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project NC City/County: Pittsylvania County Sampling Date: 2024-06-13  
Applicant/Owner: Mountain Valley Pipeline LLC State: Virginia Sampling Point: SP-B075  
Investigator(s): ES, LC, PM Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 2  
Subregion (LRR or MLRA): P 136 Lat: 36.58738896 Long: -79.58648536 Datum: NAD 83  
Soil Map Unit Name: 23C - Clover fine sandy loam, 7 to 15 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within PEM W-B036b, sample plot representative of conditions in PEM W-B024.  
Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

HYDRIC SOIL INDICATOR F3 IS MET.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project NC City/County: Pittsylvania County Sampling Date: 2024-06-13  
Applicant/Owner: Mountain Valley Pipeline LLC State: Virginia Sampling Point: SP-B077  
Investigator(s): ES, LC, PM Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 0-2  
Subregion (LRR or MLRA): P 136 Lat: 36.59028984 Long: -79.58326311 Datum: NAD 83  
Soil Map Unit Name: 29D - Pinkston-Clover complex, 15 to 35 percent slopes, very stony NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within PEM W-B037a. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project NC City/County: Pittsylvania County Sampling Date: 2024-06-14  
Applicant/Owner: Mountain Valley Pipeline LLC State: Virginia Sampling Point: SP-B080  
Investigator(s): ES, LC, PM Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 0-2  
Subregion (LRR or MLRA): P 136 Lat: 36.59874431 Long: -79.57430627 Datum: NAD 83  
Soil Map Unit Name: 5C3 - Clifford sandy clay loam, 7 to 15 percent slopes, severely eroded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within PFO W-B039b. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within PSS W-B041. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Site was revisited on 01/09/25, and soils data was updated to show hydric soils as present. Site was originally sampled on 6/14/24.

 \_\_\_ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
  
<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**  
  
**Tree** – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
  
**Sapling/Shrub** – Woody plants, excluding vines, less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.  
  
**Herb** – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
  
**Woody vine** – All woody vines greater than 3.28 ft in height.

**Hydrophytic Vegetation Present?**      Yes ✓      No \_\_\_\_\_

SOIL

Sampling Point: SP-B082a

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☒ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is present.

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is present.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project NC City/County: Pittsylvania County Sampling Date: 2024-06-17  
Applicant/Owner: Mountain Valley Pipeline LLC State: Virginia Sampling Point: SP-B086  
Investigator(s): ES, JM Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Slope Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.61330082 Long: -79.5634708 Datum: NAD 83  
Soil Map Unit Name: 4C - Clifford sandy loam, 7 to 15 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes _____	No <input checked="" type="checkbox"/>	
Wetland Hydrology Present?	Yes _____	No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PFO W-B043. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey

-								

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☒ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is present.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

**Dominance test and prevalence index are met.**

**Hydrophytic Vegetation Indicators:**

\_\_\_ 1 - Rapid Test for Hydrophytic Vegetation

☒ 2 - Dominance Test is >50%

☒ 3 - Prevalence Index is ≤3.0<sup>1</sup>

\_\_\_ 4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)

\_\_\_ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/Shrub** – Woody plants, excluding vines, less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

**Herb** – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vine** – All woody vines greater than 3.28 ft in height.

**Hydrophytic Vegetation Present?**

Yes ☒ No \_\_\_\_\_

**Hydrophytic Vegetation Indicators:**

☐ 1 - Rapid Test for Hydrophytic Vegetation

☒ 2 - Dominance Test is >50%

☒ 3 - Prevalence Index is ≤3.0<sup>1</sup>

☐ 4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)

☐ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/Shrub** – Woody plants, excluding vines, less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

**Herb** – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vine** – All woody vines greater than 3.28 ft in height.

**Hydrophytic Vegetation Present?**      Yes ☒      No ☐

Remarks: (Include photo numbers here or on a separate sheet.)

**Dominance test and prevalence index are met.**

 \_\_\_ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
  
<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**  
  
**Tree** – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
  
**Sapling/Shrub** – Woody plants, excluding vines, less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.  
  
**Herb** – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
  
**Woody vine** – All woody vines greater than 3.28 ft in height.

**Hydrophytic Vegetation Present?** Yes \_\_\_\_\_ No ☒

SOIL

Sampling Point: SP-B121

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☒ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is met.

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Field Revisits City/County: Pittsylvania County Sampling Date: 2025-01-09  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-F004  
Investigator(s): Burns & McDonnell (PM & LC) Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Drainageway Local relief (concave, convex, none): Convex Slope (%): 5  
Subregion (LRR or MLRA): P 136 Lat: 36.5887865 Long: -79.5849913 Datum: WGS 84  
Soil Map Unit Name: 23C - Clover fine sandy loam, 7 to 15 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No \_\_\_\_\_  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes _____ No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>	
Wetland Hydrology Present? Yes _____ No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PEM W-F002. The USACE Antecedent Precipitation Tool indicates drier than normal conditions were present 3 months prior to survey.

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Field Revisits City/County: Pittsylvania County Sampling Date: 2025-01-10  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-F006  
Investigator(s): Burns & McDonnell (PM & GP) Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Concave Slope (%): 2  
Subregion (LRR or MLRA): P 136 Lat: 36.613443 Long: -79.5633509 Datum: WGS 84  
Soil Map Unit Name: 4C - Clifford sandy loam, 7 to 15 percent slopes NWI classification: R4SBC

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No \_\_\_\_\_  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes _____	No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PFO W-B043. The USACE Antecedent Precipitation Tool indicates drier than normal conditions were present 3 months prior to survey.

## **Appendix D – USACE Norfolk District Wetland Attribute Forms**

---

US Army Corps of Engineers Norfolk District Wetland Attribute Form

Wetland Identifier: W-A001										Prepared by: L. Cooper	Date:14FEB2025
Community Type of wetland system being evaluated (use Natural Communities of VA): Piedmont/Mountain Floodplain Forests & Swamps										Latitude/Longitude: 36.820896, -79.349653	
Acreage of Wetland/Acreage of Impact: 0.351833										Nearest named watercourse: Little Cherrystone Creek	
Landscape position of wetland: Floodplain										Adjacent landuse: Agricultural, Woodland	
Distance to nearest roadway or development: 580 feet										Wetland has been altered or manipulated: Disturbed by grazing	
Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region											

ATTRIBUTES

A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

Qualifiers	Attributes										Comments and/or detailed observations	
	Check all that apply & identify which Attribute the Qualifier applies to											
		A	B	C	D	E	F	G	H	I		
1. Public or private wells occur below the wetland	N/A											
2. Gravel/sandy soils are present in/adjacent to the wetland	N/A											
3. Fragipan/impervious soils/bedrock are present in the wetland	N/A											
4. Fine grained mineral/organic soils are present in the wetland	X				X	X						
5. A man-made ditch is associated with/adjacent/contiguous to the wetland	N/A											
6. A perennial/intermittent watercourse is associated with/adjacent/contiguous to the wetland	X	X		X				X				
7. A pond/lake is associated with/adjacent/contiguous to the wetland	X	X	X	X	X			X	X			
8. Critical habitat for state/federally listed rare/threatened/endangered plant/animal species is present in the wetland	N/A											
9. State/federally listed rare/threatened/endangered plant/animal species are present in the wetland	N/A											
10. A defined/constricted outlet is associated with the wetland	N/A											
11. A defined inlet is associated with the wetland	N/A											
12. Water quality of the watercourse/pond/lake associated with the wetland meets or exceeds standards	X	X							X			
13. Signs of groundwater discharge are present in the wetland	X	X										
14. Signs of variable water levels are present in the wetland	N/A											
15. The size of the wetland relative to its watershed is large	N/A											
16. Pondered/open water is within the wetland	N/A											
17. The wetland exists in a flat area with flood storage potential	X		X									
18. The wetland watershed contains a high percentage of impervious surfaces	N/A											
19. Flood storage is small/nonexistent in the watershed	N/A											
20. The wetland receives/retains sheetflow from the surrounding uplands	X		X									
21. The wetland receives/detains excessive flood water from watercourses within the watershed	X		X									
22. The watercourse associated with the wetland is sinuous or diffuse	N/A											
23. The wetland is located in/along/at the head of a watercourse	X		X									
24. The wetland contains a high density of vegetation	X		X		X	X	X		X			
25. Forest is the dominant cover type in the watershed	N/A											
26. Woody debris, undercut/overhanging banks and/or vegetation are present within the wetland or the watercourse associated with the wetland	X			X								
27. Width of watercourse (bank to bank) associated with the wetland is more than 50 feet	N/A											
28. Vegetation along the banks provides shade for the watercourse associated with the wetland	N/A											
29. Submerged vegetation/gravel beds/other habitat that appears to be suitable for spawning is present in the watercourse associated with the wetland	N/A											
30. Barrier(s) to anadromous fish (such as dams, waterfalls, road crossings) are absent from the watercourse associated with the wetland	X			X								
31. Evidence of fish/shellfish is present within the watercourse associated with the wetland and/or within the wetland	N/A											
32. Sources of excess sediments are present in the watershed	N/A											
33. Sources of pollutants are present in the watershed	N/A											
34. Flow velocities visibly decrease within the wetland	X				X							
35. Erosion is visible within the watercourse associated with the wetland and/or within the wetland	X				X			X				
36. Flows within the wetland are diffuse	X				X	X

Acreage of Wetland/Acreage of Impact: 0.030741										Nearest named watercourse: Little Cherrystone Creek	
Landscape position of wetland: Floodplain										Adjacent landuse: Commercial, woodland, cleared right-of-way	
Distance to nearest roadway or development: 65 feet										Wetland has been altered or manipulated: N/A	
Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region											
ATTRIBUTES											
A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.											
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.											
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.											
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.											
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.											
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.											
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.											
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.											
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

US Army Corps of Engineers Norfolk District Wetland Attribute Form

[illegible]

US Army Corps of Engineers Norfolk District Wetland Attribute Form										
Wetland Identifier: W-A010c										Prepared by: K. Gard Date:26AUG24
Community Type of wetland system being evaluated (use Natural Communities of VA): Piedmont/Mountain Floodplain Forests & Swamps										Latitude/Longitude: 36.805118, -79.366779
Acreage of Wetland/Acreage of Impact: 0.025273										Nearest named watercourse: Cherrystone Creek
Landscape position of wetland: Floodplain										Adjacent landuse: Pasture, woodland, cleared right-of-way
Distance to nearest roadway or development: 0.43 miles										Wetland has been altered or manipulated: N/A
Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region										
ATTRIBUTES										
A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.										
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.										
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.										
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.										
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.										
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.										
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.										
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.										
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

Wetland Identifier: W-A011										Prepared by: K. Gard	Date:27AUG24
Community Type of wetland system being evaluated (use Natural Communities of VA): Piedmont/Mountain Floodplain Forests & Swamps										Latitude/Longitude: 36.808655, -79.362851	
Acreage of Wetland/Acreage of Impact: 0.032209										Nearest named watercourse: Cherrystone Creek	
Landscape position of wetland: Floodplain										Adjacent landuse: Woodland, pasture, cleared right-of-way	
Distance to nearest roadway or development: 975 feet										Wetland has been altered or manipulated: Significantly disturbed by natural gas pipeline right-of-way	
Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region											
ATTRIBUTES											
A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.											
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.											
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.											
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.											
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.											
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.											
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.											
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.											
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

#### ATTRIBUTES

<b>A. GROUNDWATER RECHARGE/DISCHARGE:</b> This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.
<b>B. FLOODFLOW ALTERATION (Storage &amp; Desynchronization):</b> This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.
<b>C. FISH AND SHELLFISH HABITAT:</b> This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.
<b>D. SEDIMENT/POLLUTANT RETENTION:</b> This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.
<b>E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION:</b> This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.
<b>F. PRODUCTION EXPORT (Nutrients):</b> This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.
<b>G. STREAMBANK EROSION/SHORELINE STABILIZATION:</b> This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.
<b>H. WILDLIFE HABITAT:</b> This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.
<b>I. RARE/THREATENED/ENDANGERED SPECIES:</b> This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

17. The wetland exists in a flat area with flood storage potential	X		X								
18. The wetland watershed contains a high percentage of impervious surfaces	N/A										
19. Flood storage is small/nonexistent in the watershed	N/A										
20. The wetland receives/retains sheetflow from the surrounding uplands	X		X								
21. The wetland receives/detains excessive flood water from watercourses within the watershed	X		X								
22. The watercourse associated with the wetland is sinuous or diffuse	N/A										
23. The wetland is located in/along/at the head of a watercourse	X		X								
24. The wetland contains a high density of vegetation	X		X		X	X	X		X		
25. Forest is the dominant cover type in the watershed	N/A										
26. Woody debris, undercut/overhanging banks and/or vegetation are present within the wetland or the watercourse associated with the wetland	X			X							
27. Width of watercourse (bank to bank) associated with the wetland is more than 50 feet	N/A										
28. Vegetation along the banks provides shade for the watercourse associated with the wetland	X			X							
29. Submerged vegetation/gravel beds/other habitat that appears to be suitable for spawning is present in the watercourse associated with the wetland	N/A										
30. Barrier(s) to anadromous fish (such as dams, waterfalls, road crossings) are absent from the watercourse associated with the wetland	X			X							
31. Evidence of fish/shellfish is present within the watercourse associated with the wetland and/or within the wetland	N/A										
32. Sources of excess sediments are present in the watershed	X							X			
33. Sources of pollutants are present in the watershed	N/A										
34. Flow velocities visibly decrease within the wetland	X				X						
35. Erosion is visible within the watercourse associated with the wetland and/or within the wetland	X				X			X			
36. Flows within the wetland are diffuse	X				X	X					

US Army Corps of Engineers Norfolk District Wetland Attribute Form

[illegible]

US Army Corps of Engineers Norfolk District Wetland Attribute Form										
Wetland Identifier: W-A015										Prepared by: K. Gard Date:27AUG24
Community Type of wetland system being evaluated (use Natural Communities of VA): Piedmont/Mountain Floodplain Forests & Swamps										Latitude/Longitude: 36.816144, -79.353295
Acreage of Wetland/Acreage of Impact: 0.014154										Nearest named watercourse: Cherrystone Creek
Landscape position of wetland: Floodplain										Adjacent landuse: Woodland
Distance to nearest roadway or development: 525 feet										Wetland has been altered or manipulated: N/A
Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region										
ATTRIBUTES										
A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.										
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.										
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.										
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.										
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.										
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.										
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.										
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.										
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

Wetland Identifier: W-A024										Prepared by: K. Gard Date:28AUG24
Community Type of wetland system being evaluated (use Natural Communities of VA): Piedmont/Mountain Floodplain Forests & Swamps										Latitude/Longitude: 36.766506, -79.400151
Acreage of Wetland/Acreage of Impact: 0.049249										Nearest named watercourse: Dry Fork
Landscape position of wetland: Floodplain										Adjacent landuse: Woodland
Distance to nearest roadway or development: 665 feet										Wetland has been altered or manipulated: N/A
Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region										
ATTRIBUTES										
A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.										
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.										
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.										
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.										
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.										
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.										
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.										
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.										
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

22. The watercourse associated with the wetland is sinuous or diffuse	N/A										
23. The wetland is located in/along/at the head of a watercourse	N/A										
24. The wetland contains a high density of vegetation	X		X		X	X	X		X		
25. Forest is the dominant cover type in the watershed	N/A										
26. Woody debris, undercut/overhanging banks and/or vegetation are present within the wetland or the watercourse associated with the wetland	X			X							
27. Width of watercourse (bank to bank) associated with the wetland is more than 50 feet	N/A										
28. Vegetation along the banks provides shade for the watercourse associated with the wetland	X			X							
29. Submerged vegetation/gravel beds/other habitat that appears to be suitable for spawning is present in the watercourse associated with the wetland	X			X							
30. Barrier(s) to anadromous fish (such as dams, waterfalls, road crossings) are absent from the watercourse associated with the wetland	N/A										
31. Evidence of fish/shellfish is present within the watercourse associated with the wetland and/or within the wetland	N/A										
32. Sources of excess sediments are present in the watershed	X							X			
33. Sources of pollutants are present in the watershed	N/A										
34. Flow velocities visibly decrease within the wetland	X				X						
35. Erosion is visible within the watercourse associated with the wetland and/or within the wetland	X				X			X			
36. Flows within the wetland are diffuse	X				X	X					

US Army Corps of Engineers Norfolk District Wetland Attribute Form

[illegible]

US Army Corps of Engineers Norfolk District Wetland Attribute Form										
Wetland Identifier: W-A030a										Prepared by: K. Gard Date:29AUG24
Community Type of wetland system being evaluated (use Natural Communities of VA): Piedmont/Mountain Floodplain Forests & Swamps										Latitude/Longitude: 36.728975, -79.445933
Acreage of Wetland/Acreage of Impact: 0.082913										Nearest named watercourse: White Oak Creek
Landscape position of wetland: Floodplain										Adjacent landuse: Woodland, cleared right-of-way, agriculture
Distance to nearest roadway or development: 0.11 miles										Wetland has been altered or manipulated: Significantly disturbed by natural gas pipeline right-of-way and beaver activity
Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region										
ATTRIBUTES										
A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.										
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.										
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.										
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.										
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.										
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.										
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.										
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.										
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

Landscape position of wetland: Floodplain										Adjacent landuse: Woodland, cleared right-of-way
Distance to nearest roadway or development: 415 feet										Wetland has been altered or manipulated: N/A
Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region										
ATTRIBUTES										
A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.										
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.										
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.										
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.										
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.										
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.										
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.										
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.										
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

ATTRIBUTES

A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

ATTRIBUTES

A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

Wetland Identifier: W-A057										Prepared by: K. Gard      Date:18SEP24
Community Type of wetland system being evaluated (use Natural Communities of VA): Piedmont/Mountain Floodplain Forests & Swamps										Latitude/Longitude: 36.635997, -79.538094
Acreage of Wetland/Acreage of Impact: 0.010042										Nearest named watercourse: Sandy River
Landscape position of wetland: Floodplain										Adjacent landuse: Woodland
Distance to nearest roadway or development: 0.35 miles										Wetland has been altered or manipulated: N/A
Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region										
ATTRIBUTES										
A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.										
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.										
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.										
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.										
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.										
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.										
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.										
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.										
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

US Army Corps of Engineers Norfolk District Wetland Attribute Form										
Wetland Identifier: W-A070c										Prepared by: K. Gard                      Date:20SEP24
Community Type of wetland system being evaluated (use Natural Communities of VA): Piedmont/Mountain Floodplain Forests & Swamps										Latitude/Longitude: 79.4188144°W 36.7576913°N
Acreage of Wetland/Acreage of Impact: 0.092521										Nearest named watercourse: White Oak Creek
Landscape position of wetland: Floodplain										Adjacent landuse: Woodland, cleared right-of-way
Distance to nearest roadway or development: 430 feet										Wetland has been altered or manipulated: N/A
Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region										
ATTRIBUTES										
A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.										
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.										
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.										
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.										
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.										
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.										
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.										
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.										
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

ATTRIBUTES

A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

Qualifiers	Attributes										Comments and/or detailed observations
	Check all that apply & identify which Attribute the Qualifier applies to										
		A	B	C	D	E	F	G	H	I	
1. Public or private wells occur below the wetland	N/A										
2. Gravel/sandy soils are present in/adjacent to the wetland	N/A										
3. Fragipan/impervious soils/bedrock are present in the wetland	N/A										
4. Fine grained mineral/organic soils are present in the wetland	X				X	X					
5. A man-made ditch is associated with/adjacent/contiguous to the wetland	N/A										
6. A perennial/intermittent watercourse is associated with/adjacent/contiguous to the wetland	X	X		X				X			
7. A pond/lake is associated with/adjacent/contiguous to the wetland	N/A										
8. Critical habitat for state/federally listed rare/threatened/endangered plant/animal species is present in the wetland	N/A										
9. State/federally listed rare/threatened/endangered plant/animal species are present in the wetland	N/A										
10. A defined/constricted outlet is associated with the wetland	N/A										
11. A defined inlet is associated with the wetland	N/A										
12. Water quality of the watercourse/pond/lake associated with the wetland meets or exceeds standards	X	X							X		
13. Signs of groundwater discharge are present in the wetland	N/A										
14. Signs of variable water levels are present in the wetland	N/A										
15. The size of the wetland relative to its watershed is large	N/A										
16. Ponded/open water is within the wetland	X		X		X	X					
17. The wetland exists in a flat area with flood storage potential	X		X								
18. The wetland watershed contains a high percentage of impervious surfaces	N/A										
19. Flood storage is small/nonexistent in the watershed	N/A										
20. The wetland receives/retains sheetflow from the surrounding uplands	X		X								
21. The wetland receives/detains excessive flood water from watercourses within the watershed	X		X								
22. The watercourse associated with the wetland is sinuous or diffuse	N/A										
23. The wetland is located in/along/at the head of a watercourse	N/A										
24. The wetland contains a high density of vegetation	N/A										
25. Forest is the dominant cover type in the watershed	N/A										
26. Woody debris, undercut/overhanging banks and/or vegetation are present within the wetland or the watercourse associated with the wetland	N/A										
27. Width of watercourse (bank to bank) associated with the wetland is more than 50 feet	N/A										
28. Vegetation along the banks provides shade for the watercourse associated with the wetland	X			X							
29. Submerged vegetation/gravel beds/other habitat that appears to be suitable for spawning is present in the watercourse associated with the wetland	N/A										
30. Barrier(s) to anadromous fish (such as dams, waterfalls, road crossings) are absent from the watercourse associated with the wetland	X			X							
31. Evidence of fish/shellfish is present within the watercourse associated with the wetland and/or within the wetland	N/A										
32. Sources of excess sediments are present in the watershed	N/A										
33. Sources of pollutants are present in the watershed	N/A										
34. Flow velocities visibly decrease within the wetland	X				X						
35. Erosion is visible within the watercourse associated with the wetland and/or within the wetland	N/A										
36. Flows within the wetland are diffuse	X				X	X

Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region										
ATTRIBUTES										
A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.										
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.										
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.										
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.										
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.										
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.										
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.										
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.										
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

31. Evidence of fish/shellfish is present within the watercourse associated with the wetland and/or within the wetland	N/A										
32. Sources of excess sediments are present in the watershed	N/A										
33. Sources of pollutants are present in the watershed	N/A										
34. Flow velocities visibly decrease within the wetland	X				X						
35. Erosion is visible within the watercourse associated with the wetland and/or within the wetland	N/A										
36. Flows within the wetland are diffuse	X				X	X					

US Army Corps of Engineers Norfolk District Wetland Attribute Form

[illegible]

US Army Corps of Engineers Norfolk District Wetland Attribute Form										
Wetland Identifier: W-B026										Prepared by: K. Gard      Date:24SEP24
Community Type of wetland system being evaluated (use Natural Communities of VA): Piedmont/Mountain Floodplain Forests & Swamps										Latitude/Longitude: 79.5910951°W 36.5838377°N
Acreage of Wetland/Acreage of Impact: 0.204631										Nearest named watercourse: Trotters Creek
Landscape position of wetland: Floodplain										Adjacent landuse: Woodland, cleared right-of-way
Distance to nearest roadway or development: 0.31 miles										Wetland has been altered or manipulated: N/A
Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region										
ATTRIBUTES										
A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.										
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.										
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.										
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.										
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.										
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.										
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.										
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.										
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

ATTRIBUTES

A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.

US Army Corps of Engineers Norfolk District Wetland Attribute Form										
Wetland Identifier: W-B046										Prepared by: K. Gard      Date:26SEP24
Community Type of wetland system being evaluated (use Natural Communities of VA): Piedmont/Mountain Floodplain Forests & Swamps										Latitude/Longitude: 79.5398766"W 36.6335752"N
Acreage of Wetland/Acreage of Impact: 0.069154										Nearest named watercourse: Sandy River
Landscape position of wetland: Floodplain										Adjacent landuse: Woodland, cleared right-of-way
Distance to nearest roadway or development: 0.52 miles										Wetland has been altered or manipulated: Disturbed by natural gas pipeline right-of-way
Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region										
ATTRIBUTES										
A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.										
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.										
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.										
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.										
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.										
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.										
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.										
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.										
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

US Army Corps of Engineers Norfolk District Wetland Attribute Form

Wetland Identifier: W-G001a										Prepared by: L. Cooper	Date:14FEB2025
Community Type of wetland system being evaluated (use Natural Communities of VA): Piedmont/Mountain Floodplain Forests & Swamps										Latitude/Longitude: 36.551127, -79.614462	
Acreage of Wetland/Acreage of Impact: 0.03 acres										Nearest named watercourse: Trotters Creek	
Landscape position of wetland: Depression										Adjacent landuse: Woodland, road, cleared logging area	
Distance to nearest roadway or development: 0.02 miles										Wetland has been altered or manipulated: N/A	
Corps Regional Supplement Delineation Completed/Reviewed: Completed & Reviewed Eastern Mountains and Piedmont Region											

ATTRIBUTES

A. GROUNDWATER RECHARGE/DISCHARGE: This attribute considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. It relates to the fundamental interaction between wetlands and aquifers, regardless of the size or importance of either.
B. FLOODFLOW ALTERATION (Storage & Desynchronization): This attribute considers the potential for the wetland to reduce flood damage by water retention for prolonged periods following precipitation events and the gradual release of floodwaters. It relates to the potential for the wetland to add to the stability of the wetland ecological system or the wetland buffering characteristics relative to erosion and flood prone areas.
C. FISH AND SHELLFISH HABITAT: This attribute considers the potential of the seasonal or permanent watercourses associated with the wetland to provide fish or shellfish habitat.
D. SEDIMENT/POLLUTANT RETENTION: This attribute considers the potential of the wetland in reducing or preventing degradation of water quality. It relates to the potential for the wetland to act as a trap for sediment and other pollutants in runoff water from the surrounding watershed.
E. NUTRIENT REMOVAL/RETENTION/TRANSFORMATION: This attribute considers the potential for the wetland to act as a trap for nutrients in runoff water from surrounding uplands or contiguous wetlands and the ability of the wetland to process these nutrients into other forms or trophic levels. It relates to the potential of the wetland to prevent adverse effects of nutrients entering aquifers or surface waters such as ponds, lakes, and other watercourses.
F. PRODUCTION EXPORT (Nutrients): This attribute considers the potential of the wetland to produce food or usable products for humans or other living organisms.
G. STREAMBANK EROSION/SHORELINE STABILIZATION: This attribute considers the potential of the wetland to stabilize streambanks and shorelines against erosion.
H. WILDLIFE HABITAT: This attribute considers the potential of the wetland to provide habitat for various types of animal populations typically associated with wetlands. Consideration should be given to both resident and/or migrating species.
I. RARE/THREATENED/ENDANGERED SPECIES: This attribute considers the potential for the wetland to support rare/threatened/endangered plant and/or animal species.

Qualifiers	Attributes										Comments and/or detailed observations
	Check all that apply & identify which Attribute the Qualifier applies to										
		A	B	C	D	E	F	G	H	I	
1. Public or private wells occur below the wetland	N/A										
2. Gravel/sandy soils are present in/adjacent to the wetland	N/A										
3. Fragipan/impervious soils/bedrock are present in the wetland	N/A										
4. Fine grained mineral/organic soils are present in the wetland	N/A										
5. A man-made ditch is associated with/adjacent/contiguous to the wetland	N/A										
6. A perennial/intermittent watercourse is associated with/adjacent/contiguous to the wetland	N/A										
7. A pond/lake is associated with/adjacent/contiguous to the wetland	N/A										
8. Critical habitat for state/federally listed rare/threatened/endangered plant/animal species is present in the wetland	N/A										
9. State/federally listed rare/threatened/endangered plant/animal species are present in the wetland	N/A										
10. A defined/constricted outlet is associated with the wetland	N/A										
11. A defined inlet is associated with the wetland	N/A										
12. Water quality of the watercourse/pond/lake associated with the wetland meets or exceeds standards	N/A										
13. Signs of groundwater discharge are present in the wetland	N/A										
14. Signs of variable water levels are present in the wetland	N/A										
15. The size of the wetland relative to its watershed is large	N/A										
16. Ponded/open water is within the wetland	N/A										
17. The wetland exists in a flat area with flood storage potential	X		X								
18. The wetland watershed contains a high percentage of impervious surfaces	N/A										
19. Flood storage is small/nonexistent in the watershed	N/A										
20. The wetland receives/retains sheetflow from the surrounding uplands	X		X								
21. The wetland receives/detains excessive flood water from watercourses within the watershed	N/A										
22. The watercourse associated with the wetland is sinuous or diffuse	N/A										
23. The wetland is located in/along/at the head of a watercourse	N/A										
24. The wetland contains a high density of vegetation	N/A										
25. Forest is the dominant cover type in the watershed	N/A										
26. Woody debris, undercut/overhanging banks and/or vegetation are present within the wetland or the watercourse associated with the wetland	N/A										
27. Width of watercourse (bank to bank) associated with the wetland is more than 50 feet	N/A										
28. Vegetation along the banks provides shade for the watercourse associated with the wetland	N/A										
29. Submerged vegetation/gravel beds/other habitat that appears to be suitable for spawning is present in the watercourse associated with the wetland	N/A										
30. Barrier(s) to anadromous fish (such as dams, waterfalls, road crossings) are absent from the watercourse associated with the wetland	N/A										
31. Evidence of fish/shellfish is present within the watercourse associated with the wetland and/or within the wetland	N/A										
32. Sources of excess sediments are present in the watershed	N/A										
33. Sources of pollutants are present in the watershed	N/A										
34. Flow velocities visibly decrease within the wetland	N/A										
35. Erosion is visible within the watercourse associated with the wetland and/or within the wetland	N/A										
36. Flows within the wetland are diffuse	X				X	X

# 1.0 Introduction

---

Mountain Valley Pipeline LLC (MVP) is proposing a new 31.5 mile, 30-inch diameter natural gas pipeline initiating in Pittsylvania County, Virginia, and terminating in Rockingham County, North Carolina (NC). A total of five miles of pipeline would be constructed in North Carolina and the remaining 26.5 miles of pipeline in Virginia. MVP also proposes to construct three interconnection facilities in North Carolina and one interconnection facility in Virginia as part of the Amendment Project (Amendment Project). BMcD EGS P.C. (BMcD) was contracted to conduct a wetland delineation for the Amendment Project. The North Carolina portion of the Amendment Project begins northeast of Quesinberry Rd in Eden, NC (36°29'29.50"N, 79°40'58.21"W) and terminates at the North Carolina-Virginia border (36°32'29.87"N, 79°37'57.71"W) 0.18 miles northeast of the intersection of U.S. Highway 311 and Buffalo Road, approximately 2.33 miles northeast of Fitzgerald, NC. A corridor of variable width and access roads were surveyed along this route (Amendment Project Area). The North Carolina portion of the Amendment Project encompasses 139.3 acres (Amendment Project Area; Figure A-1). The Amendment Project Area consists primarily of broadleaf deciduous and mixed forests, pine plantations, current and former pastures, and planted row crops. This report encompasses only the North Carolina portion of the Amendment Project.

BMcD conducted a wetland delineation for the Amendment Project to evaluate the presence of wetlands and other water resources, including streams, drainages, and ponds, that may fall under the jurisdiction of the U.S. Army Corps of Engineers (USACE) and North Carolina Department of Environmental Quality (NCDEQ) as designated by Sections 404 and 401 of the Clean Water Act. The wetland delineation was conducted in accordance with the 1987 *Corps of Engineers Wetland Delineation Manual* (87 Manual; USACE 1987) and the 2012 *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Eastern Mountains and Piedmont Region – Version 2.0* (Regional Supplement; USACE 2012). BMcD employs experienced delineators and strives to achieve a high a degree of precision and accuracy in the delineation of aquatic feature boundaries. As noted in the 87 Manual and Regional Supplement, delineations conducted at different times and/or by different delineators may result in minor variations in area and boundaries due to several factors. Those factors may include (1) the exercise of professional judgment to evaluate site-specific conditions and indicators; (2) statistical variability inherent in the use of transects and sampling methods to map features; and (3) normal annual and seasonal variability.

## 2.0 Methods

---

### 2.1 Desktop Review

BMcD reviewed publicly available information in Geographic Information Systems to identify potential wetland and water body features in the Amendment Project Area prior to conducting a site visit. This information included U.S. Geological Survey (USGS) 7.5-minute topographic maps Southeast Eden and Northeast Eden, NC quadrangles (USGS 2022a, b), USGS National Hydrography Dataset (NHD; USGS 2016), U.S. Fish & Wildlife Service National Wetlands Inventory (NWI) maps (USFWS 2024), National Agriculture Imagery Program (NAIP) aerial photography (NAIP 2021), the Federal Emergency Management Agency (FEMA) floodplain and floodway data (FEMA 2007), and the U.S. Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Soil Survey Geographic (SSURGO) digital data for Rockingham County, North Carolina (USDA NRCS 2023). These maps are provided in Appendix A. The USACE Antecedent Precipitation Tool (APT) was reviewed to evaluate precipitation conditions and evaluate “normal conditions” as required as part of the wetland delineation (Appendix E; USACE 2023).

Data from the above sources were used to identify probable locations of wetlands within the Amendment Project Area. The USACE defines wetlands as areas that contain hydric soils, hydrophytic vegetation, and wetland hydrology. This desktop review used existing information to identify areas where these indicators are likely to be present, including overlapping areas of NWI and NHD features, hydric soils, lower elevations in the landscape, saturation or inundation visible on aerial imagery, etc. The onsite wetland delineation described below was conducted to verify and update the findings of the desktop review.

### 2.2 Wetland Delineation Field Survey

A wetland delineation was completed June 3 through 18, August 19 through September 4, September 26, and October 3, 2024, and January 13 through 16, 2025. in accordance with the 87 Manual and the Regional Supplement. Boundaries were walked and recorded with sub-meter-accurate global positioning systems, including SXblue and Juniper Systems Geode. Sample plots were established at multiple locations, typically paired on either side of the wetland/upland boundary to demonstrate wetland and non-wetland conditions. The location and extent of wetlands, streams, and drainage ditches are shown with aerial imagery background on Figure A-5 in Appendix A.

In December 2024, MVP was notified of a concurrent Project that parallels and overlaps with the Amendment Project Area along the majority of its length. The other Project proponent’s delineation matches Burns & McDonnell’s for the majority of the areas where the surveyed areas overlap. In areas where the two delineations differed within the survey area overlap, Burns & McDonnell met the other Project proponent’s wetland scientist staff on-site to rectify differences. At all of the locations where differences existed, additional data was collected by one or both parties to reflect an agreed upon determination based on the conditions that were directly observed. This delineation confirmation visit was conducted from January 13 through 16, 2025. Data from this effort has been incorporated into the report and appendices.

Wetland Determination Data Forms from the Regional Supplement were completed to document representative conditions at each sample point location within the Amendment Project Area (Appendix B). Vegetation, soil conditions, and hydrologic indicators were recorded at each of these sample plots. The areal percent cover of each plant species was estimated by stratum, and the appropriate wetland indicator status from the USACE 2020 National Wetland Plant List was assigned to determine the presence or absence of

hydrophytic vegetation. Soil color and texture were recorded using a Munsell Soil Color chart (Munsell 2021) and analyzed in accordance with the Field Indicators of Hydric Soils in the United States (USDA NRCS 2024a). Hydric soil indicators were noted on the data form when present. Observations of primary and secondary hydrology indicators were noted based on field observations and desktop data review. Representative photographs were taken at each sample plot location and are included in Appendix C.

Each wetland was evaluated using the North Carolina Wetland Assessment Method in accordance with the 2016 *North Carolina Wetland Assessment Method (NC WAM) User Manual Version 5*. Copies of the North Carolina Wetland Assessment Method Forms are included in Appendix D.

Each wetland was assigned a classification based on the Cowardin Classification System (Cowardin et al. 1979) and consisted of the following:

- Palustrine Emergent (PEM) – characterized by a 30 percent or greater areal cover of emergent, herbaceous vegetation. Additionally, the combined areal cover of shrubs, saplings, and trees in these wetlands was less than 30 percent.
- Palustrine Forested (PFO) – characterized by a 30 percent or greater areal cover in the tree stratum and an aerial cover of less than 30 percent in the shrub/sapling stratum.
- Palustrine Scrub-Shrub (PSS) – characterized by a 30 percent or greater areal cover in the shrub/sapling stratum and an aerial cover of less than 30 percent in the tree stratum.
- Palustrine Unconsolidated Bottom (PUB) – characterized by a combined areal cover of less than 30 percent of vegetation.

Stream channels were delineated, and characteristics were recorded including ordinary high-water mark (OHWM) width and depth as well as flow regime.

Flow regimes at each delineated stream were assigned based on observed flow at the time of the delineation and consisted of one of the following designations:

- Perennial – characterized by the presence of a substantial volume of flow at the time of the site visit, indicating that water flows year-round.
- Intermittent – characterized by the presence of a limited volume of flow at the time of the site visit, indicating that the stream is partially fed by groundwater, but that flow is not continuous year-round.
- Ephemeral – characterized by a defined bed and bank but had limited or no flow during the site visit, indicating these streams largely carry water only during and after precipitation events.

Summary tables in Section 3.0 list the features identified and provide wetland acreage and linear feet of stream channels and drainage ditches within the Amendment Project Area.

## 3.0 Results

---

### 3.1 Desktop Review

The NCDEQ 8-digit Hydrologic Unit Code (HUC) Subbasins Map (2023) indicates the Amendment Project is situated within the Upper Dan (HUC 03010103) drainage basin, which is a sub-basin to the Roanoke River (HUC 0301001). The 2021 NAIP aerial photography indicates that the Amendment Project Area consists primarily of broadleaf deciduous and mixed forests, pine plantations, current and former pastures, and planted row crops.

A review of the USGS topographic maps (Figure A-2, Appendix A) indicates the Amendment Project Area consisted of varying terrain with elevations ranging from 474-650 feet above sea level, large portions of forested areas with scattered open areas, and numerous drainageways and stream channels flowing generally southeast into the Dan River, Dry Creek, and Cascade Creek and unnamed tributaries to these listed streams. Three named features, the Dan River, Dry Creek, and Cascade Creek, are located within the Amendment Project Area.

USDA NRCS SSURGO digital data indicates that portions of 13 soil map units are located in the Amendment Project Area (Figure A-3, Appendix A). Of the 13 soil map units, only one map unit (Leaksville silt loam, 0 to 4 percent slopes) is included in the NRCS Hydric Soils List (Figure A-4; USDA NRCS, 2024b).

NWI data indicates one PEM wetland, one PFO wetland, one PUB wetland, and 11 riverine features are located within the Amendment Project Area (Figure A-4, Appendix A).

NHD data indicates the Amendment Project Area crosses numerous streams, including Cascade Creek and the Dan River (Figure A-4, Appendix A).

The FIRM data indicates the Amendment Project Area crosses several floodplains as well as the floodway associated with the Dan River (Figure A-4, Appendix A).

The USACE APT indicates that the antecedent precipitation conditions that the site experienced fluctuated over time. All days that surveys were conducted were under normal antecedent precipitation conditions except for June 10, 17, and 18, 2024, and January 13 through 16, 2025, where conditions were drier than normal, and August 21 through 30, September 26, and October 3, 2024, where conditions were wetter than normal. A copy of the USACE APT results is provided in Appendix E.

### 3.2 Delineated Areas

From June 3 through 18, August 19 through September 4, September 26, and October 3, 2024, wetland scientists conducted a wetland delineation of the Amendment Project Area. From January 13 through 16, 2025, wetland scientists from Burns & McDonnell worked in conjunction with entities from the adjacent parallel Project to resolve any differences in the delineation where the two Project Survey Areas overlap. Per the request of USACE, a subsequent site confirmation for the Amendment Project occurred on March 7, 2025. The locations, boundaries, and characteristics of wetlands and streams were determined and recorded within the Amendment Project Area. The land cover and delineated wetlands and other waterbodies are discussed in detail below.

### 3.2.1 Vegetation

The Amendment Project Area primarily consisted of broadleaf deciduous forest, mixed forest, pine plantations, current and former pastures, and row crops. Dominant tree and shrub/sapling species within the Amendment Project Area include red maple (*Acer rubrum*), tuliptree (*Liriodendron tulipifera*), Persian silk tree (*Albizia julibrissin*), white oak (*Quercus alba*), black cherry (*Prunus serotina*), American hornbeam (*Carpinus caroliniana*), sweetgum (*Liquidambar styraciflua*), willow oak (*Quercus phellos*), and pignut hickory (*Carya glabra*). Dominant herbaceous species within the Amendment Project Area included white clover (*Trifolium repens*), Japanese stiltgrass (*Microstegium vimineum*), fowl mannagrass (*Glyceria striata*), rescue brome (*Bromus catharticus*), annual bluegrass (*Poa annua*), tall fescue (*Schedonorus arundinaceus*), false nettle (*Boehmeria cylindrica*), tall goldenrod (*Solidago altissima*), and deertongue (*Dichanthelium clandestinum*).

### 3.2.2 Soils

Typical soils within the Amendment Project Area ranged from dark grayish brown (10YR 4/2) to strong brown (7.5YR 4/6) and ranged from clay loam to sandy loam in texture. Redoximorphic features were typically present in wetland soils and absent from upland soils. Soils observed within delineated wetland areas are described below and are shown on the Data Forms in Appendix B.

### 3.2.3 Hydrology

The primary source of hydrology for wetland areas was retention of surface runoff in geomorphic positions with poor drainage and flooding from adjacent streams and groundwater. Typical indicators of hydrology within wetlands included Water-Stained Leaves, Geomorphic Position, and a positive FAC-Neutral Test.

### 3.2.4 Wetlands

The delineation identified a total of 58 wetlands, comprised of three wetland types: PEM, PFO, and PSS, encompassing a total of 12.07 acres within the Amendment Project Area. Two wetlands, OW-B002, and W-B045, were delineated during field surveys but were determined to be located outside the Amendment Project Area. These features are depicted on Figure A-5; however, it is not included in the summary of wetlands or Table 3-1. BMcD assumes a Preliminary Jurisdictional Request (PJD) will be submitted to USACE for the Amendment Project, therefore all wetlands within the Amendment Project Area are assumed to be under both USACE and NCDEQ jurisdiction. Table 3-1 below includes the Cowardin classification, acreage, and proposed jurisdictional status of each wetland delineated within the Amendment Project Area. The location and extent of the delineated wetlands are depicted in Figure A-5 in Appendix A. Data forms and color photographs from the wetland delineation are included in Appendices B and C, respectively.

Thirty-six PEM wetlands encompassing 6.13 acres were delineated. Common vegetation within PEM wetlands included trumpet vine (*Campsis radicans*), lamp rush (*Juncus effusus*), small carpet grass (*Arthraxon hispidus*), poison ivy (*Toxicodendron radicans*), deertongue, globe flatsedge (*Cyperus echinatus*), marsh seedbox (*Ludwigia palustris*), foxtail sedge (*Carex vulpinoidea*), and Frank's sedge (*Carex frankii*). Wetland hydrology was commonly indicated by Saturation being Visible on Aerial Imagery, Drainage Patterns, Geomorphic Position, and a positive FAC-Neutral Test. Hydric soil was mainly indicated by Depleted Matrix.

Fourteen PFO wetlands encompassing 4.48 acres were delineated. Dominant woody vegetation in PFO wetlands included tuliptree, red maple, willow oak, loblolly pine (*Pinus taeda*), sweetgum, American hornbeam, box elder (*Acer negundo*), and American sycamore (*Platanus occidentalis*). Dominant herbaceous vegetation in PFO wetlands included Japanese stiltgrass, jumpseed (*Persicaria virginiana*) fowl mannagrass,

straw-colored flatsedge (*Cyperus strigosus*), velvety rosette panic-grass (*Dichanthelium scoparium*), marsh seedbox, drooping sedge (*Carex prasina*), round-leaved greenbrier (*Smilax rotundifolia*), and jack-in-the-pulpit (*Arisaema triphylla*). Wetland hydrology was mainly indicated by High Water Table, Saturation, Saturation Visible on Aerial Imagery, Inundation Visible on Aerial Imagery, Drainage Patterns, Geomorphic Position, and a positive FAC-Neutral Test. Hydric soil was mainly indicated by Depleted Matrix.

Eight PSS wetlands encompassing 1.46 acres were delineated. Dominant woody vegetation in PSS wetlands included green ash (*Fraxinus pennsylvanica*), buttonbush (*Cephalanthus occidentalis*), common persimmon (*Diospyros virginiana*), swamp rose (*Rosa palustris*), and American sycamore. Dominant herbaceous vegetation in PSS wetlands included pointed broomsedge (*Carex scoparia*), swamp rose mallow (*Hibiscus moscheutos*), lamp rush, tall goldenrod, and velvety rosette panic-grass. Wetland hydrology was mainly indicated by Oxidized Rhizospheres, Geomorphic Position, and a positive FAC-Neutral Test. Hydric soil was commonly indicated by Depleted Matrix.

(d) W-B013b is located within North Carolina and Virginia. The delineated area of W-B013b includes the portion within North Carolina.				

### 3.3 Streams

A total of 26 streams, for a combined length of 3,090 feet, were identified during the site evaluation. Six streams were delineated during field surveys but were determined to be located outside the Amendment Project Area. These features, S-B012, S-B037, S-B048, and S-B049, S-F004, and S-F006 are depicted on Figure A-5; however, they are not included in the summary of streams or Table 3-2. Streams were classified into ephemeral, intermittent, or perennial categories. BMCD assumes all streams identified will fall under the jurisdiction of the USACE and NCDEQ. Table 3-2 below includes the length of each stream delineated within the Amendment Project Area. The location and extent of the delineated streams are depicted in Figure A-5 in Appendix A. Color photographs from the wetland delineation are located in Appendix C.

Seven perennial streams extending for a delineated length of 926 feet were identified. These perennial streams ranged from 25 to 200 feet wide and a depth of 0.5 feet or more at the OHWM. The depth of the Dan River could not be safely assessed.

Ten intermittent streams extending for a delineated length of 975 feet were identified. Intermittent streams were characterized by the presence of a limited volume of flow at the time of the site visit, indicating that the stream is partially fed by groundwater but that the stream may not flow during dry periods. These intermittent streams ranged from three to five feet wide and 0.25 to one foot deep at the OHWM.

Nine ephemeral streams extending for a delineated length of 1,189 feet were identified. Ephemeral streams were characterized by a defined bed and bank but had limited or no flow during the site visit, indicating these streams largely carry water only during and after precipitation events. These ephemeral streams ranged from one to five feet wide 0.1 to one foot deep at the OHWM.

**Table 3-2 Type and Length of Delineated Streams**

Stream Number	Stream Type	Length of Stream (linear feet) <sup>a</sup>	OHWM Width (ft)	OHWM Depth (ft)	Proposed Federal and State Jurisdiction <sup>b</sup>	Figure A-5 Page Number

TOTALS						
Ephemeral		1,189				
Intermittent		975				
Perennial		926				
OVERALL		3,090				
(a) Linear feet of jurisdictional streams within the Amendment Project Area, rounded to the nearest foot. Three streams were delineated during field surveys but were determined to not be located within the Amendment Project Area. These features, S-B037, S-B-48, and S-B049 are depicted on Figure A-5, however they are not included in Table 3-2.						
(b) All delineated stream features within the Amendment Project Area are assumed to be under USACE and NCDEQ jurisdiction.						

## 4.0 Conclusions

---

BMcD conducted a wetland delineation of the Amendment Project Area from June 3 through 18, August 19 through September 4, September 26, and October 3, 2024, to identify wetlands and other aquatic resources. Burns & McDonnell verified their findings with wetland scientists from an adjacent parallel Project from January 13 through 16, 2025. A total of 58 wetlands and 26 streams were identified. BMcD assumes a PJD submittal to the USACE, therefore all wetlands and streams are assumed to be under the jurisdiction of the USACE and NCDEQ. The jurisdiction of all features identified is subject to change pending a jurisdictional determination by the USACE and NCDEQ.

**Appendix B – Routine Wetland Determination  
Data Forms: Eastern Mountains  
and Piedmont Region**

---

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Rockingham County Sampling Date: 2025-01-13  
Applicant/Owner: Mountain Valley Pipeline, LLC State: North Carolina Sampling Point: SP-A157  
Investigator(s): WJ, LC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Bench Local relief (concave, convex, none): Convex Slope (%): 0-2  
Subregion (LRR or MLRA): P 136 Lat: 36.52790094 Long: -79.64614974 Datum: NAD 83  
Soil Map Unit Name: DaA - Dan River loam, 0 to 2 percent slopes, frequently flooded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within PFO W-B027a. Wetland type was originally classified as PEM, and was changed to PFO upon revisiting. The USACE Antecedent Precipitation Tool indicates wetter than normal conditions were present 3 months prior to survey. This site was revisited on 1/13/24 and the vegetation data was updated. Original sampling date was 9/03/24.

### HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)	
Primary Indicators (minimum of one is required; check all that apply)			
<input type="checkbox"/> Surface Water (A1)	<input type="checkbox"/> True Aquatic Plants (B14)	<input type="checkbox"/> Surface Soil Cracks (B6)	
<input checked="" type="checkbox"/> High Water Table (A2)	<input type="checkbox"/> Hydrogen Sulfide Odor (C1)	<input type="checkbox"/> Sparsely Vegetated Concave Surface (B8)	
<input checked="" type="checkbox"/> Saturation (A3)	<input type="checkbox"/> Oxidized Rhizospheres on Living Roots (C3)	<input checked="" type="checkbox"/> Drainage Patterns (B10)	
<input type="checkbox"/> Water Marks (B1)	<input type="checkbox"/> Presence of Reduced Iron (C4)	<input type="checkbox"/> Moss Trim Lines (B16)	
<input type="checkbox"/> Sediment Deposits (B2)	<input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C6)	<input type="checkbox"/> Dry-Season Water Table (C2)	
<input type="checkbox"/> Drift Deposits (B3)	<input type="checkbox"/> Thin Muck Surface (C7)	<input type="checkbox"/> Crayfish Burrows (C8)	
<input type="checkbox"/> Algal Mat or Crust (B4)	<input type="checkbox"/> Other (Explain in Remarks)	<input type="checkbox"/> Saturation Visible on Aerial Imagery (C9)	
<input type="checkbox"/> Iron Deposits (B5)		<input type="checkbox"/> Stunted or Stressed Plants (D1)	
<input type="checkbox"/> Inundation Visible on Aerial Imagery (B7)		<input type="checkbox"/> Geomorphic Position (D2)	
<input type="checkbox"/> Water-Stained Leaves (B9)		<input type="checkbox"/> Shallow Aquitard (D3)	
<input type="checkbox"/> Aquatic Fauna (B13)		<input type="checkbox"/> Microtopographic Relief (D4)	
		<input checked="" type="checkbox"/> FAC-Neutral Test (D5)	

#### Field Observations:

Surface Water Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_  
Water Table Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_  
Saturation Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_  
(includes capillary fringe)

Wetland Hydrology Present? Yes ☒ No \_\_\_\_\_

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Indicators A2, A3, B10, and D5 are present.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☒ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is present.

_____ = Total Cover																		
50% of total cover: _____ 20% of total cover: _____																		
<b>Hydrophytic Vegetation Present?</b> Yes _____ No <u>✓</u>																		

Remarks: (Include photo numbers here or on a separate sheet.)

No tests for hydrophytic vegetation are met. An unidentified Carex species occupied 5% of the herbaceous stratum. Because this taxon could not be identified to species level, it was not included in dominance test calculations. If it were included, no hydrophytic vegetation indicator would be met regardless of indicator status. Vegetation significantly disturbed by mowing. Mowed stems of Solidago altissima (FACU) were abundant in the sample plot location.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate City/County: Rockingham County Sampling Date: 2024-08-27  
Applicant/Owner: Mountain Valley Pipeline, LLC State: North Carolina Sampling Point: SP-B008a  
Investigator(s): AC, LC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave Slope (%): 0-1  
Subregion (LRR or MLRA): P 136 Lat: 36.49470941 Long: -79.6777966 Datum: NAD 83  
Soil Map Unit Name: BaB - Banister loam, 0 to 4 percent slopes, rarely flooded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	Is the Sampled Area within a Wetland?	Yes <input checked="" type="checkbox"/>	No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____			
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____			

Remarks:

Wetland sample plot within W-B051. The USACE Antecedent Precipitation Tool indicates wetter than normal conditions 3 months prior to survey.

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

## Hydric Soil Indicators:

- ☐ Histosol (A1)  
☐ Histic Epipedon (A2)  
☐ Black Histic (A3)  
☐ Hydrogen Sulfide (A4)  
☐ Stratified Layers (A5)  
☐ 2 cm Muck (A10) (**LRR N**)  
☐ Depleted Below Dark Surface (A11)  
☐ Thick Dark Surface (A12)  
☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)  
☐ Sandy Gleyed Matrix (S4)  
☐ Sandy Redox (S5)  
☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)  
☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)  
☐ Thin Dark Surface (S9) (**MLRA 147, 148**)  
☐ Loamy Gleyed Matrix (F2)  
☐ Depleted Matrix (F3)  
☐ Redox Dark Surface (F6)  
☐ Depleted Dark Surface (F7)  
☐ Redox Depressions (F8)  
☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)  
☐ Umbric Surface (F13) (**MLRA 136, 122**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)  
☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)  
☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)  
☐ Very Shallow Dark Surface (TF12)  
☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

## Restrictive Layer (if observed):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes \_\_\_\_\_ No ☒

Remarks:

No indicators are present.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate City/County: Rockingham County Sampling Date: 2024-08-27  
Applicant/Owner: Mountain Valley Pipeline, LLC State: North Carolina Sampling Point: SP-B016a  
Investigator(s): AC, LC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Hillslope Local relief (concave, convex, none): Convex Slope (%): 3  
Subregion (LRR or MLRA): P 136 Lat: 36.51325001 Long: -79.66008075 Datum: NAD 83  
Soil Map Unit Name: CmD - Clover sandy loam, 8 to 15 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes _____ No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>	
Wetland Hydrology Present? Yes _____ No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PEM W-B008. The USACE Antecedent Precipitation Tool indicates wetter than normal conditions 3 months prior to survey.

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)	
Primary Indicators (minimum of one is required; check all that apply)			
<input type="checkbox"/> Surface Water (A1)	<input type="checkbox"/> True Aquatic Plants (B14)	<input type="checkbox"/> Surface Soil Cracks (B6)	
<input type="checkbox"/> High Water Table (A2)	<input type="checkbox"/> Hydrogen Sulfide Odor (C1)	<input type="checkbox"/> Sparsely Vegetated Concave Surface (B8)	
<input type="checkbox"/> Saturation (A3)	<input type="checkbox"/> Oxidized Rhizospheres on Living Roots (C3)	<input type="checkbox"/> Drainage Patterns (B10)	
<input type="checkbox"/> Water Marks (B1)	<input type="checkbox"/> Presence of Reduced Iron (C4)	<input type="checkbox"/> Moss Trim Lines (B16)	
<input type="checkbox"/> Sediment Deposits (B2)	<input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C6)	<input type="checkbox"/> Dry-Season Water Table (C2)	
<input type="checkbox"/> Drift Deposits (B3)	<input type="checkbox"/> Thin Muck Surface (C7)	<input type="checkbox"/> Crayfish Burrows (C8)	
<input type="checkbox"/> Algal Mat or Crust (B4)	<input type="checkbox"/> Other (Explain in Remarks)	<input type="checkbox"/> Saturation Visible on Aerial Imagery (C9)	
<input type="checkbox"/> Iron Deposits (B5)		<input type="checkbox"/> Stunted or Stressed Plants (D1)	
<input type="checkbox"/> Inundation Visible on Aerial Imagery (B7)		<input type="checkbox"/> Geomorphic Position (D2)	
<input type="checkbox"/> Water-Stained Leaves (B9)		<input type="checkbox"/> Shallow Aquitard (D3)	
<input type="checkbox"/> Aquatic Fauna (B13)		<input type="checkbox"/> Microtopographic Relief (D4)	
		<input type="checkbox"/> FAC-Neutral Test (D5)	

Field Observations:		Wetland Hydrology Present? Yes _____ No <input checked="" type="checkbox"/>
Surface Water Present? Yes _____ No <input checked="" type="checkbox"/>	Depth (inches): _____	
Water Table Present? Yes _____ No <input checked="" type="checkbox"/>	Depth (inches): _____	
Saturation Present? Yes _____ No <input checked="" type="checkbox"/> (includes capillary fringe)	Depth (inches): _____	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

No indicators met.

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes \_\_\_\_\_ No ☒

Remarks:

No indicators are present.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

## Hydric Soil Indicators:

- ☐ Histosol (A1)  
☐ Histic Epipedon (A2)  
☐ Black Histic (A3)  
☐ Hydrogen Sulfide (A4)  
☐ Stratified Layers (A5)  
☐ 2 cm Muck (A10) (**LRR N**)  
☐ Depleted Below Dark Surface (A11)  
☐ Thick Dark Surface (A12)  
☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)  
☐ Sandy Gleyed Matrix (S4)  
☐ Sandy Redox (S5)  
☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)  
☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)  
☐ Thin Dark Surface (S9) (**MLRA 147, 148**)  
☐ Loamy Gleyed Matrix (F2)  
☒ Depleted Matrix (F3)  
☐ Redox Dark Surface (F6)  
☐ Depleted Dark Surface (F7)  
☐ Redox Depressions (F8)  
☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)  
☐ Umbric Surface (F13) (**MLRA 136, 122**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)  
☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)  
☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)  
☐ Very Shallow Dark Surface (TF12)  
☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

## Restrictive Layer (if observed):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is present.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project NC City/County: Eden/Rockingham Sampling Date: 2024-06-12  
Applicant/Owner: Mountain Valley Pipeline LLC State: North Carolina Sampling Point: SP-B061  
Investigator(s): ES, LC, PM Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Hillslope Local relief (concave, convex, none): Convex Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.53066314 Long: -79.64269308 Datum: NAD 83  
Soil Map Unit Name: BaB - Banister loam, 0 to 4 percent slopes, rarely flooded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes _____	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes _____	No <input checked="" type="checkbox"/>			
Wetland Hydrology Present?	Yes _____	No <input checked="" type="checkbox"/>			

Remarks:

Upland sample plot adjacent to PEM W-B029. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within W-B053. The USACE Antecedent Precipitation Tool indicates wetter than normal conditions 3 months prior to survey. This wetland exhibited disturbed hydrology, vegetation, and soils from poor farming practices, resulting in an isolated feature that does not connect down valley to any nearby WOTUS.

## HYDROLOGY

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate City/County: Rockingham County Sampling Date: 2024-08-27  
Applicant/Owner: Mountain Valley Pipeline, LLC State: North Carolina Sampling Point: SP-B069b  
Investigator(s): AC, LC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Terrace/floodplain Local relief (concave, convex, none): None Slope (%): 0  
Subregion (LRR or MLRA): P 136 Lat: 36.52555028 Long: -79.64868399 Datum: NAD 83  
Soil Map Unit Name: DaA - Dan River loam, 0 to 2 percent slopes, frequently flooded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes _____ No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>	
Wetland Hydrology Present? Yes _____ No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PEM W-A053. The USACE Antecedent Precipitation Tool indicates wetter than normal conditions 3 months prior to survey.

## SOIL

Sampling Point: SP-B070

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix		Redox Features				Texture	Remarks
	Color (moist)	%	Color (moist)	%	Type <sup>1</sup>	Loc <sup>2</sup>		
0 - 2	7.5YR 3/1	100						
2 - 20	10YR 5/3	95	7.5YR 5/6	5	C	M		
-								
-								
-								
-								
-								
-								
-								
-								

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

## Hydric Soil Indicators:

- ☐ Histosol (A1)  
☐ Histic Epipedon (A2)  
☐ Black Histic (A3)  
☐ Hydrogen Sulfide (A4)  
☐ Stratified Layers (A5)  
☐ 2 cm Muck (A10) (**LRR N**)  
☐ Depleted Below Dark Surface (A11)  
☐ Thick Dark Surface (A12)  
☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)  
☐ Sandy Gleyed Matrix (S4)  
☐ Sandy Redox (S5)  
☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)  
☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)  
☐ Thin Dark Surface (S9) (**MLRA 147, 148**)  
☐ Loamy Gleyed Matrix (F2)  
☐ Depleted Matrix (F3)  
☐ Redox Dark Surface (F6)  
☐ Depleted Dark Surface (F7)  
☐ Redox Depressions (F8)  
☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)  
☐ Umbric Surface (F13) (**MLRA 136, 122**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)  
☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)  
☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)  
☐ Very Shallow Dark Surface (TF12)  
☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

## Restrictive Layer (if observed):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes \_\_\_\_\_ No ☒

Remarks:

No indicators are present.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project NC City/County: Eden/Rockingham Sampling Date: 2024-06-17  
Applicant/Owner: Mountain Valley Pipeline LLC State: North Carolina Sampling Point: SP-B090  
Investigator(s): ES, JM Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Slope Local relief (concave, convex, none): Convex Slope (%): 2  
Subregion (LRR or MLRA): P 136 Lat: 36.53427844 Long: -79.64258431 Datum: NAD 83  
Soil Map Unit Name: BaB - Banister loam, 0 to 4 percent slopes, rarely flooded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes _____	No <input checked="" type="checkbox"/>	
Wetland Hydrology Present?	Yes _____	No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PFO W-B045. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)	
Primary Indicators (minimum of one is required; check all that apply)			
<input type="checkbox"/> Surface Water (A1)	<input type="checkbox"/> True Aquatic Plants (B14)	<input type="checkbox"/> Surface Soil Cracks (B6)	
<input type="checkbox"/> High Water Table (A2)	<input type="checkbox"/> Hydrogen Sulfide Odor (C1)	<input type="checkbox"/> Sparsely Vegetated Concave Surface (B8)	
<input type="checkbox"/> Saturation (A3)	<input type="checkbox"/> Oxidized Rhizospheres on Living Roots (C3)	<input type="checkbox"/> Drainage Patterns (B10)	
<input type="checkbox"/> Water Marks (B1)	<input type="checkbox"/> Presence of Reduced Iron (C4)	<input type="checkbox"/> Moss Trim Lines (B16)	
<input type="checkbox"/> Sediment Deposits (B2)	<input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C6)	<input type="checkbox"/> Dry-Season Water Table (C2)	
<input type="checkbox"/> Drift Deposits (B3)	<input type="checkbox"/> Thin Muck Surface (C7)	<input type="checkbox"/> Crayfish Burrows (C8)	
<input type="checkbox"/> Algal Mat or Crust (B4)	<input type="checkbox"/> Other (Explain in Remarks)	<input type="checkbox"/> Saturation Visible on Aerial Imagery (C9)	
<input type="checkbox"/> Iron Deposits (B5)		<input type="checkbox"/> Stunted or Stressed Plants (D1)	
<input type="checkbox"/> Inundation Visible on Aerial Imagery (B7)		<input type="checkbox"/> Geomorphic Position (D2)	
<input type="checkbox"/> Water-Stained Leaves (B9)		<input type="checkbox"/> Shallow Aquitard (D3)	
<input type="checkbox"/> Aquatic Fauna (B13)		<input type="checkbox"/> Microtopographic Relief (D4)	
		<input checked="" type="checkbox"/> FAC-Neutral Test (D5)	

<b>Field Observations:</b>		<b>Wetland Hydrology Present?</b> Yes _____ No <input checked="" type="checkbox"/>
Surface Water Present?	Yes _____ No <input checked="" type="checkbox"/> Depth (inches): _____	
Water Table Present?	Yes _____ No <input checked="" type="checkbox"/> Depth (inches): _____	
Saturation Present? (includes capillary fringe)	Yes _____ No <input checked="" type="checkbox"/> Depth (inches): _____	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Indicator D5 is present.

**VEGETATION (Four Strata) – Use scientific names of plants.**
