# 1.0 Introduction

---

Mountain Valley Pipeline LLC (MVP) is proposing a new 31.36 mile, 30-inch diameter natural gas pipeline initiating in Pittsylvania County, Virginia (VA) and terminating in Rockingham County, North Carolina (NC). A total of 26.75 miles of pipeline would be constructed in Virginia, and the remaining 4.61 miles of pipeline in North Carolina. MVP also proposes to construct one interconnection facility in Virginia and three interconnection facilities in North Carolina as part of the MVP Southgate Amendment Project (Amendment Project). Burns & McDonnell Engineering Company, Inc. (Burns & McDonnell) was contracted to conduct a wetland delineation for the Amendment Project. The Virginia portion of the Amendment Project begins southwest of Transco Road in Transco Village, VA (36°50'8.45"N, 79°20'25.50"W and 36°49'54.28"N, 79°20'5.07"W) and terminates at the Virginia-North Carolina border (36°32'29.87"N, 79°37'57.71"W) 0.18 miles northeast of the intersection of U.S. Highway 311 and Buffalo Road. Approximately 2.33 miles northeast of Fitzgerald, NC. A corridor of variable width and access roads were surveyed along this route (Amendment Project Area). The Virginia portion of the Amendment Project encompasses 586.8 acres (Project Area; Figure A-1). The Amendment Project Area consists primarily of broadleaf deciduous and mixed forests, pine plantations, current and former pastures, and planted row crops. This report encompasses only the Virginia portion of the Amendment Project.

Burns & McDonnell conducted a wetland delineation for the Amendment Project to evaluate the presence of wetlands and other water resources, including streams, drainages, and ponds, that may fall under the jurisdiction of the U.S. Army Corps of Engineers (USACE) and Virginia Department of Environmental Quality (VDEQ) as designated by Sections 404 and 401 of the Clean Water Act. The wetland delineation was conducted in accordance with the 1987 *Corps of Engineers Wetland Delineation Manual* (87 Manual; USACE 1987) and the 2012 *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Eastern Mountains and Piedmont Region – Version 2.0* (Regional Supplement; USACE 2012). Burns & McDonnell employs experienced delineators and strives to achieve a high degree of precision and accuracy in the delineation of aquatic feature boundaries. As noted in the 87 Manual and Regional Supplement, delineations conducted at different times and/or by different delineators may result in minor variations in area and boundaries due to several factors. Those factors may include (1) the exercise of professional judgment to evaluate site-specific conditions and indicators; (2) statistical variability inherent in the use of transects and sampling methods to map features; and (3) normal annual and seasonal variability.

## 2.0 Methods

---

### 2.1 Desktop Review

Burns & McDonnell reviewed publicly available information in Geographic Information Systems to identify potential wetland and water body features in the Amendment Project Area prior to conducting a site visit. This information included U.S. Geological Survey (USGS) 7.5-minute topographic maps *Northeast Eden, NC* and *Brosville, Whitmell, Mount Hermon, Chatham, Spring Garden, and Blairs, VA* quadrangles (USGS 2022a, 2022b, 2022c, 2022d, 2022e, 2022f, 2022g), USGS National Hydrography Dataset (NHD USGS 2016), U.S. Fish & Wildlife Service National Wetlands Inventory (NWI) maps (USFWS 2024), National Agriculture Imagery Program (NAIP) aerial photography (NAIP 2022), the Federal Emergency Management Agency (FEMA) floodplain and floodway data (FEMA 2010), and the U.S. Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Soil Survey Geographic (SSURGO) digital data for Pittsylvania County, Virginia (USDA NRCS 2023). These maps are provided in Appendix A. The USACE Antecedent Precipitation Tool (APT) was reviewed to evaluate precipitation conditions and evaluate “normal conditions” as required as part of the wetland delineation (Appendix E; USACE 2023).

Data from the above sources were used to identify probable locations of wetlands within the Amendment Project Area. The USACE defines wetlands as areas that contain hydric soils, hydrophytic vegetation, and wetland hydrology. This desktop review used existing information to identify areas where these indicators are likely to be present, including overlapping areas of NWI and NHD features, hydric soils, lower elevations in the landscape, saturation or inundation visible on aerial imagery, etc. The onsite wetland delineation described below was conducted to verify and update the findings of the desktop review.

### 2.2 Wetland Delineation Field Survey

A wetland delineation was completed June 3 through 18, August 19 through September 4, September 26, October 3, 2024, and January 7 through 10, 2025 in accordance with the 87 Manual and the Regional Supplement. Boundaries were walked and recorded with sub-meter-accurate global positioning systems, including SXblue and Juniper Systems Geode. Sample plots were established at multiple locations, typically paired on either side of the wetland/upland boundary to demonstrate wetland and non-wetland conditions. The location and extent of wetlands, streams, and drainage ditches are shown with aerial imagery background on Figure A-5 in Appendix A.

In December 2024, MVP was notified of a concurrent Project that parallels and overlaps with the Amendment Project Area along the majority of its length. The other Project proponent’s delineation matches Burns & McDonnell’s for the majority of the areas where the surveyed areas overlap. In areas where the two delineations differed within the survey area overlap, Burns & McDonnell met the other Project proponent’s wetland scientist staff on-site to rectify differences. At all of the locations where differences existed, additional data was collected by one or both parties to reflect an agreed upon determination based on the conditions that were directly observed. This delineation confirmation visit was conducted from January 7 through 10, 2025. Data from this effort has been incorporated into the report and appendices.

Wetland Determination Data Forms from the Regional Supplement were completed to document representative conditions at each sample point location within the Amendment Project Area (Appendix B). Vegetation, soil conditions, and hydrologic indicators were recorded at each of these sample plots. The areal percent cover of each plant species was estimated by stratum, and the appropriate wetland indicator status

from the USACE 2020 National Wetland Plant List was assigned to determine the presence or absence of hydrophytic vegetation. Soil color and texture were recorded using a Munsell Soil Color chart (Munsell 2021) and analyzed in accordance with the Field Indicators of Hydric Soils in the United States (USDA NRCS 2024a). Hydric soil indicators were noted on the data form when present. Observations of primary and secondary hydrology indicators were noted based on field observations and desktop data review. Representative photographs were taken at each sample plot location and are included in Appendix C. Each wetland was evaluated for the presence of all attributes according to the guidance in the 2020 USACE Norfolk District: Wetland Attribute Form: Procedures Manual Version 1.0. Copies of the wetland attribute forms for each feature are included in Appendix D.

One parcel north of Halifax Road was unable to be accessed by survey teams during the field survey due to landowner restrictions. Based on a review of previous survey data collected in 2018 (Mountain Valley Pipeline LLC 2018) and visual observations from abutting public roads, it was determined that a small feature was present within the southeastern corner of the Amendment Project Area on the subject parcel. Since landowner restrictions did not allow access, this feature was digitally added to the current wetland delineation using data from the previous survey conducted in 2018 (Mountain Valley Pipeline LLC 2018).

Each wetland was assigned a classification based on the Cowardin Classification System (Cowardin et al. 1979) and consisted of the following:

- Palustrine Emergent (PEM) – characterized by a 30 percent or greater areal cover of emergent, herbaceous vegetation. Additionally, the combined areal cover of shrubs, saplings, and trees in these wetlands was less than 30 percent.
- Palustrine Forested (PFO) – characterized by a 30 percent or greater areal cover in the tree stratum and an aerial cover of less than 30 percent in the shrub/sapling stratum.
- Palustrine Scrub-Shrub (PSS) – characterized by a 30 percent or greater areal cover in the shrub/sapling stratum and an aerial cover of less than 30 percent in the tree stratum.
- Palustrine Unconsolidated Bottom (PUB) – characterized by a combined areal cover of less than 30 percent of vegetation.

Stream channels were delineated, and characteristics were recorded, including ordinary high-water mark (OHWM) width and depth as well as flow regime. Flow regimes at each delineated stream were assigned based on observed flow at the time of the delineation and consisted of one of the following designations:

- Perennial – characterized by the presence of a substantial volume of flow at the time of the site visit, indicating that water flows year-round.
- Intermittent – characterized by the presence of a limited volume of flow at the time of the site visit, indicating that the stream is partially fed by groundwater, but that flow is not continuous year-round.
- Ephemeral – characterized by a defined bed and bank but had limited or no flow during the site visit, indicating these streams largely carry water only during and after precipitation events.

Summary tables in Section 3.0 list the features identified and provide wetland acreage and linear feet of stream channels and drainage ditches within the Amendment Project Area.

## 3.0 Results

---

### 3.1 Desktop Review

The Virginia Department of Conservation and Recreation (2024) Hydrologic Unit Explorer indicates the Amendment Project is situated within the Upper Dan (Hydrologic Unit Code (HUC) 03010103), Banister River (HUC 03010105), and Lower Dan (HUC 03010104) drainage basins, which are sub-basins to the Roanoke River (HUC 0301001). The 2022 NAIP aerial photography indicates that the Amendment Project Area consists primarily of broadleaf deciduous and mixed forests, pine plantations, current and former pastures, and planted row crops.

A review of the USGS topographic maps (Figure A-2, Appendix A) indicates the Amendment Project Area consists of varying terrain, with elevations ranging from 478 to 858 feet above sea level, large portions of forested areas with scattered open areas, and numerous drainageways and stream channels including eight named features, Little Cherrystone Creek, Cherrystone Creek, the Banister River, White Oak Creek, Sandy Creek, the Sandy River, Trayner Branch, and Trotters Creek. The drainageways and stream channels generally flow southeast into named streams, including Little Cherrystone Creek, Cherrystone Creek, the Banister River, White Oak Creek, Sandy Creek, the Sandy River, Trayner Branch, Trotters Creek, and many unnamed tributaries to these named streams, as well as addition unnamed tributaries to Silver Creek and the Dan River.

The USDA NRCS SSURGO digital data indicates that portions of 31 soil map units are located in the Amendment Project Area (Figure A-3). Of the 31 soil map units, only one map unit (Hatboro silt loam, 0 to 2 percent slopes, frequently flooded) is included in the NRCS Hydric Soils List (Figure A-3, Appendix A; Soil Survey Staff NRCS, 2024b).

The NWI data indicates two PEM wetlands, four PFO wetlands, one PSS wetland, and 33 riverine features are located within the Amendment Project Area (Figure A-4, Appendix A).

The NHD data indicates the Amendment Project Area crosses numerous streams, including Little Cherrystone Creek, Cherrystone Creek, Banister River, White Oak Creek, Sandy Creek, Sandy River, Trayner Branch, and Trotters Creek (Figure A-4, Appendix A).

The FIRM data indicates the Amendment Project Area crosses several floodplains as well as the floodway associated with Sandy Creek, Sandy River, Banister River, and Cherrystone Creek (Figure A-4, Appendix A).

The USACE APT indicates that the antecedent precipitation conditions that the site experienced fluctuated over time. All days that surveys were conducted were under normal antecedent precipitation conditions except for June 10, 17, and 18, 2024, and January 8 through 10, 2025, where conditions were drier than normal and August 21 through 30, September 26, and October 3, 2024, where conditions were wetter than normal. A copy of the USACE APT results is provided in Appendix E.

### 3.2 Delineated Areas

From June 3 through 18, August 19 through September 4, September 26, and October 3, 2024, wetland scientists conducted a wetland delineation of the Amendment Project Area. From January 8 through 10, 2025, wetland scientists from Burns & McDonnell worked in conjunction with entities from the adjacent parallel Project to resolve any differences in the delineation data where the two Project Survey Areas overlap. Per the

requests by VADEQ and USACE subsequent site confirmations with the agencies occurred for both Projects on February 25, through 28, 2025. The locations, boundaries, and characteristics of wetlands and streams were determined and recorded within the Amendment Project Area. The land cover and delineated wetlands and other waterbodies are discussed in detail below.

### 3.2.1 Vegetation

The Amendment Project Area primarily consisted of broadleaf deciduous forest, mixed forest, pine plantations, current and former pastures, and row crops. Dominant tree and shrub/sapling species within the Amendment Project Area include red maple (*Acer rubrum*), tuliptree (*Liriodendron tulipifera*), Persian silk tree (*Albizia julibrissin*), white oak (*Quercus alba*), black cherry (*Prunus serotina*), American hornbeam (*Carpinus caroliniana*), sweetgum (*Liquidambar styraciflua*), willow oak (*Quercus phellos*), and pignut hickory (*Carya glabra*). Dominant herbaceous species within the Amendment Project Area included white clover (*Trifolium repens*), Japanese stiltgrass (*Microstegium vimineum*), fowl mannagrass (*Glyceria striata*), rescue brome (*Bromus catharticus*), annual bluegrass (*Poa annua*), tall fescue (*Schedonorus arundinaceus*), false nettle (*Boehmeria cylindrica*), tall goldenrod (*Solidago altissima*), and deertongue (*Dichanthelium clandestinum*).

### 3.2.2 Soils

Typical soils within the Amendment Project Area ranged from gray (10YR 6/1) to pale brown (10YR 6/3) and ranged from clay loam to sandy loam in texture. Redoximorphic features were typically present in wetland soils and absent from upland soils. Soils observed within delineated wetland areas are described below and are shown on the Data Forms in Appendix B.

### 3.2.3 Hydrology

The primary source of hydrology for wetland areas was the retention of surface runoff in geomorphic positions with poor drainage, flooding from adjacent streams, and groundwater. Indicators of hydrology within wetlands included the presence of High Water Table, Saturation, Oxidized Rhizospheres on Living Roots, Drift Deposits, Drainage Patterns, Geomorphic Position, and a positive FAC-Neutral Test.

### 3.2.4 Wetlands

The delineation identified a total of 130 wetlands, comprised of four wetland types: PEM, PFO, PUB, and PSS, encompassing a total of 17.57 acres within the Amendment Project Area. Burns & McDonnell assumes a Preliminary Jurisdictional Request (PJD) will be submitted to USACE for the Amendment Project, therefore all wetlands within the Amendment Project Area are assumed to be under both USACE and VDEQ jurisdiction. Table 3-1 below includes the Cowardin classification, acreage, and proposed jurisdictional status of each wetland delineated within the Amendment Project Area. The location and extent of the delineated wetlands are depicted in Figure A-5 in Appendix A. Data forms and color photographs from the wetland delineation are included in Appendices B and C, respectively. Paired sample plots were taken at each wetland except in cases where individual wetland areas exhibited the same characteristics as nearby wetlands where paired sampled plots were taken. Data forms for wetlands W-A055, W-A056, W-A057, W-A058, W-A059, W-A060, W-A047a, W-A047b, and W-B046 are not provided as the proposed pipeline route was moved and these features would not be impacted. Several wetlands were delineated and determined to be located outside of the Amendment Project Area. These features are depicted on Figures A-5 (Appendix A) but are not included in Table 3-1.

Sixty-six PEM wetlands encompassing 8.13 acres were delineated. Common vegetation within PEM wetlands included tall fescue, hog peanut (*Amphicarpaea bracteata*), giant goldenrod (*Solidago gigantea*) ground-ivy

(*Glechoma hederacea*), lamp rush (*Juncus effusus*), swamp aster (*Symphotrichum puniceum*), deertongue, Japanese stiltgrass, fringed sedge (*Carex crinita*), and Virginia creeper (*Parthenocissus quinquefolia*). Wetland hydrology was commonly indicated by Surface Water, High Water Table, Saturation, Sediment Deposits, Drift Deposits, Drainage Patterns, Geomorphic Position, and a positive FAC-Neutral Test. Hydric soil was mainly indicated by Depleted Matrix.

Forty-six PFO wetlands encompassing 8.15 acres were delineated. Dominant woody vegetation in PFO wetlands black highbush blueberry (*Vaccinium fuscatum*), river birch (*Betula nigra*), American hornbeam, sweetgum, tuliptree, red maple, willow oak, black elderberry (*Sambucus nigra*), Chinese privet (*Ligustrum sinense*). Dominant herbaceous vegetation in PFO wetlands included ground ivy, fowl mannagrass, spotted jewelweed (*Impatiens capensis*), skunk cabbage (*Symplocarpus foetidus*), tussock sedge (*Carex stricta*), halberd-leaved smartweed (*Persicaria arifolia*), Virginia dayflower (*Commelina virginica*), marsh dewflower (*Murdannia keisak*), and round-leaved greenbrier (*Smilax rotundifolia*). Wetland hydrology was mainly indicated by Surface Water, High Water Table, Saturation, Water-Stained Leaves, Sediment Deposits, Drift Deposits, Oxidized Rhizospheres On Living Roots, Surface Soil Cracks, Drainage Patterns, Geomorphic Position, and a positive FAC-Neutral Test. Hydric soil was mainly indicated by Depleted Below Dark Surface, Loamy Gleyed Matrix, and Depleted Matrix.

Sixteen PSS wetlands encompassing 1.06 acres were delineated. Dominant woody vegetation in PSS wetlands included Chinese privet (*Ligustrum sinense*), American hornbeam, willow oak, red maple, Allegheny blackberry (*Rubus allegheniensis*), multiflora rose (*Rosa multiflora*), smooth alder (*Alnus serrulata*), black elderberry, pawpaw (*Asimina triloba*), and silky dogwood (*Cornus amomum*). Dominant herbaceous vegetation in PSS wetlands included tall goldenrod, rough horsetail (*Equisetum hyemale*), round-leaved greenbrier, Japanese stiltgrass, lamp rush, fringed sedge, Kentucky bluegrass, potato bean (*Apios americana*), and deertongue. Wetland hydrology was mainly indicated by Surface Water, High Water Table, Saturation, Sediment Deposits, Drift Deposits, Oxidized Rhizospheres On Living Roots, Iron Deposits, Drainage Patterns, Geomorphic Position, Shallow Aquitard, and a positive FAC-Neutral Test. Hydric soil was commonly indicated by Loamy Gleyed Matrix and Depleted Matrix.

Two PUB wetlands encompassing 0.21 acres were delineated. Vegetation was largely absent due to the presence of open water. Vegetation adjacent to PUB wetlands included woolgrass (*Scirpus cyperinus*), loblolly pine (*Pinus taeda*), lamp rush, narrow-leaved cattail (*Typha latifolia*), Chinese bushclover (*Lespedeza cuneata*), narrow-leaved mountain mint (*Pycnanthemum tenuifolium*), broomsedge (*Andropogon virginicus*), Allegheny blackberry, and black willow (*Salix nigra*). Soil sampling was prevented by the presence of open water, but hydric soil conditions are assumed due to inundation creating anaerobic conditions. Hydrology was indicated by Surface Water, Inundation Visible on Aerial Imagery, and Geomorphic Position.

**Table 3-1: Type and Size of Delineated Wetlands**

### 3.2.5 Streams

A total of 104 streams for a combined length of 13,973 linear feet were identified during the site evaluation, including one stream added digitally from the previous wetland survey in 2018. Streams were classified into ephemeral, intermittent, or perennial categories. Burns & McDonnell assumes all streams identified will fall under the jurisdiction of the USACE and VDEQ. Seven of the stream channels identified (S-A004, S-A008, S-A020, S-A021, S-A022, S-A063, and S-A063a) maintained drainage areas greater than 5 square miles and are likely to be subject to regulatory requirements set by the Virginia Marine Resource Commission (VMRC). Table 3-2 below includes the length of each stream delineated within the Amendment Project Area. The location and extent of the delineated streams are depicted in Figure A-5 in Appendix A. Color photographs from the wetland delineation are located in Appendix C. Several streams were delineated and determined to be located outside of the Amendment Project Area. These features are depicted on Figures A-5 (Appendix A) but are not included in Table 3-2.

Thirty-four perennial streams extending for a delineated length of 5,313 linear feet were identified. These perennial streams ranged from three to 80 feet wide and 0.5 to over 4.5 feet at the OHWM. The depth of the Sandy River at the OHWM is likely greater than 4.5 feet; however, the depth of this river could not be safely assessed.

Thirty-seven intermittent streams extending for a delineated length of 4,793 linear feet were identified. Intermittent streams were characterized by the presence of a limited volume of flow at the time of the site visit, indicating that the stream is partially fed by groundwater but that the stream may not flow during dry periods. These intermittent streams ranged from one to 10 feet wide and 0.1 to one foot deep at the OHWM.

Thirty-three ephemeral streams extending for a delineated length of 3,867 feet were identified. Ephemeral streams were characterized by a defined bed and bank but had limited or no flow during the site visit, indicating

these streams largely carry water only during and after precipitation events. These ephemeral streams ranged from one to three feet wide, 0.1 to one foot deep at the OHWM.

**Table 3-2: Type and Length of Delineated Streams**

(c) S-A074 is located within a parcel that was not accessible for field survey. Previous field survey data from 2018 (Mountain Valley Pipeline LLC 2018) was utilized.						

## 4.0 Conclusion

---

Burns & McDonnell conducted a wetland delineation of the Amendment Project Area from June 3 through 18, August 19 through September 4, September 26, and October 3, 2024, to identify wetlands and other aquatic resources. Burns & McDonnell verified their findings with wetland scientists from an adjacent parallel Project from January 8 through 10, 2025. A total of 130 wetlands and 104 stream channels were identified. Burns & McDonnell assumes a PJD submittal to the USACE, therefore all wetlands and streams are assumed to be under the jurisdiction of the USACE and VDEQ. Seven of the identified streams have a drainage area greater than 5 square miles and will also likely be subject to VMRC regulatory requirements. The jurisdiction of all features identified is subject to change pending a jurisdictional determination by the USACE and VDEQ.

Page 2 of 26

A map of a river network. The river is shown as a red line. It starts at point 1, flows to point 2, then to point 3, and finally to point 4. A yellow box highlights the section of the river between points 2 and 3. The river flows from point 1 to point 2, then turns and flows to point 3, and finally turns and flows to point 4. The river is shown as a red line. The background is a light blue color. There are some black lines on the map, possibly representing roads or boundaries. The text 'Hain' is visible in the top right corner.

An inset map showing a larger geographic area with a yellow rectangle highlighting the project area. The map includes several numbered labels: 36, 37, 38, 39, 42, and 43, which likely correspond to different map sheets or sections.

A north arrow pointing upwards, labeled 'NORTH'. Below it is a scale bar with markings for 100, 50, 0, and 100 feet. The text 'Scale in Feet' is centered below the bar.

**Appendix B – Routine Wetland Determination  
Data Forms: Eastern Mountains and Piedmont  
Region**

---

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-03  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A001  
Investigator(s): W. Jackson, C. Jerrett Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Slope Local relief (concave, convex, none): Undulating Slope (%): 3  
Subregion (LRR or MLRA): P 136 Lat: 36.820867 Long: -79.349425 Datum: NAD 83  
Soil Map Unit Name: 9C - Lackstown fine sandy loam, 7 to 15 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil ☒, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot in PEM W-A001. Soil and vegetation significantly disturbed by grazing. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is met.

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-03  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A004  
Investigator(s): W. Jackson, C. Jerrett Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Terrace Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.821185 Long: -79.348502 Datum: NAD 83  
Soil Map Unit Name: 9C - Lackstown fine sandy loam, 7 to 15 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil ☒, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes _____	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____			
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____			

Remarks:

Upland confirmation plot. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Soils naturally problematic due to position in active floodplain. Though hydrology indicators are present and soils are problematic, the area in question should not be considered wetland due to a lack of dominance of hydrophytic vegetation.

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☒ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

No indicators are met, however, top 12 inches of soil are relatively recent fluvial deposits and subject area is located within a concave terrace. The top layer of sand deposits is underlain by a depleted matrix with redoximorphic concentrations. Due to the presence of hydrology indicators and the position of the area in the landscape, soils should be considered hydric.

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (LRR N)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (LRR N, MLRA 147, 148)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (MLRA 147, 148)
- ☐ Thin Dark Surface (S9) (MLRA 147, 148)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (LRR N, MLRA 136)
- ☐ Umbric Surface (F13) (MLRA 136, 122)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 148)
- ☐ Red Parent Material (F21) (MLRA 127, 147)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (MLRA 147)
- ☐ Coast Prairie Redox (A16) (MLRA 147, 148)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 136, 147)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: Compacted Clay  
Depth (inches): 10+

Hydric Soil Present? Yes ☐ No ☒

Remarks:

No indicators are met. Compacted clay layer present at a depth of 10 inches. Unable to excavate past restrictive layer.

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.822481 Long: -79.346554 Datum: NAD 83  
Soil Map Unit Name: 8A - Codorus-Comus complex, 0 to 2 percent slopes, frequently flooded NWI classification: PFO1A

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology ☒ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot in PFO W-A003a. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Significant rainfall event within the past 24 hours, hydrology naturally problematic.

**Hydrophytic Vegetation Present?** Yes ☒ No \_\_\_\_\_

Remarks: (Include photo numbers here or on a separate sheet.)

Dominance test is met. Radii for plot sampling sizes reflect only areas exhibiting hydrology within the concave drainage. Trees and shrubs were all rooted outside the wetland on convex landforms.

 \_\_\_ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

**Definitions of Four Vegetation Strata:**  
  
**Tree** – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
  
**Sapling/Shrub** – Woody plants, excluding vines, less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.  
  
**Herb** – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
  
**Woody vine** – All woody vines greater than 3.28 ft in height.

**Hydrophytic Vegetation Present?**      Yes ☒      No \_\_\_\_\_

## SOIL

Sampling Point: SP-A012

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

-								
-								
-								
-								

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

## Hydric Soil Indicators:

- ☐ Histosol (A1)  
☐ Histic Epipedon (A2)  
☐ Black Histic (A3)  
☐ Hydrogen Sulfide (A4)  
☐ Stratified Layers (A5)  
☐ 2 cm Muck (A10) (**LRR N**)  
☐ Depleted Below Dark Surface (A11)  
☐ Thick Dark Surface (A12)  
☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)  
☐ Sandy Gleyed Matrix (S4)  
☐ Sandy Redox (S5)  
☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)  
☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)  
☐ Thin Dark Surface (S9) (**MLRA 147, 148**)  
☐ Loamy Gleyed Matrix (F2)  
☒ Depleted Matrix (F3)  
☐ Redox Dark Surface (F6)  
☐ Depleted Dark Surface (F7)  
☒ Redox Depressions (F8)  
☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)  
☐ Umbric Surface (F13) (**MLRA 136, 122**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)  
☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)  
☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)  
☐ Very Shallow Dark Surface (TF12)  
☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

## Restrictive Layer (if observed):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicators F3 and F8 are met.

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-04  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A013  
Investigator(s): W. Jackson, C. Jerrett Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Slope Local relief (concave, convex, none): Convex Slope (%): 2  
Subregion (LRR or MLRA): P 136 Lat: 36.826221 Long: -79.338705 Datum: NAD 83  
Soil Map Unit Name: 23B - Clover fine sandy loam, 2 to 7 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes _____ No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>	
Wetland Hydrology Present? Yes _____ No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PEM W-A005. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Significant rainfall event within the past 24 hours.

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

## Hydric Soil Indicators:

- ☐ Histosol (A1)  
☐ Histic Epipedon (A2)  
☐ Black Histic (A3)  
☐ Hydrogen Sulfide (A4)  
☐ Stratified Layers (A5)  
☐ 2 cm Muck (A10) (**LRR N**)  
☐ Depleted Below Dark Surface (A11)  
☐ Thick Dark Surface (A12)  
☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)  
☐ Sandy Gleyed Matrix (S4)  
☐ Sandy Redox (S5)  
☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)  
☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)  
☐ Thin Dark Surface (S9) (**MLRA 147, 148**)  
☐ Loamy Gleyed Matrix (F2)  
☐ Depleted Matrix (F3)  
☐ Redox Dark Surface (F6)  
☐ Depleted Dark Surface (F7)  
☐ Redox Depressions (F8)  
☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)  
☐ Umbric Surface (F13) (**MLRA 136, 122**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)  
☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)  
☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)  
☐ Very Shallow Dark Surface (TF12)  
☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

## Restrictive Layer (if observed):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes \_\_\_\_\_ No ☒

Remarks:

No indicators are met.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-04  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A016  
Investigator(s): W. Jackson, C. Jerrett Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.823555 Long: -79.346949 Datum: NAD 83  
Soil Map Unit Name: 8A - Codorus-Comus complex, 0 to 2 percent slopes, frequently flooded NWI classification: PFO1A

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil ☒, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology ☒ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	Is the Sampled Area within a Wetland?	Yes <input checked="" type="checkbox"/>	No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____			
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____			

Remarks:

Wetland sample plot in PEM W-A003b. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Significant rainfall event within the past 24 hours, hydrology naturally problematic. Vegetation, soil, and hydrology significantly disturbed by natural gas pipeline right-of-way.

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)	
Primary Indicators (minimum of one is required; check all that apply)			
<input type="checkbox"/> Surface Water (A1)	<input type="checkbox"/> True Aquatic Plants (B14)	<input type="checkbox"/> Surface Soil Cracks (B6)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot in PFO W-A010b. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Significant rainfall event in the past 24 hours, hydrology naturally problematic.

- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is met.

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-05  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A034  
Investigator(s): W. Jackson, C. Jerrett Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Flat Local relief (concave, convex, none): Convex Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.816875 Long: -79.354346 Datum: NAD 83  
Soil Map Unit Name: 9B - Lackstown fine sandy loam, 2 to 7 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil ☒, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No <input checked="" type="checkbox"/>	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes _____	No <input checked="" type="checkbox"/>	
Wetland Hydrology Present?	Yes _____	No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PEM W-A014. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Vegetation, soil, and hydrology significantly disturbed by agriculture.

- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☒ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: Compaction  
Depth (inches): 10+

Hydric Soil Present? Yes ☒ No ☐

Remarks:

No indicators are met. Excavation below 10 inches prevented by compaction. Though no indicators are present, there is a layer that meets the color requirements of F3 (Depleted Matrix) present that may extend below the compacted layer. Additionally, soils are significantly disturbed by a natural gas pipeline right-of-way. Because wetland hydrology and hydrophytic vegetation are present, this area is assumed to be wetland under normal, undisturbed circumstances.

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-05  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A036  
Investigator(s): W. Jackson, C. Jerrett Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Drainageway Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.816145 Long: -79.353327 Datum: NAD 83  
Soil Map Unit Name: 9B - Lackstown fine sandy loam, 2 to 7 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No \_\_\_\_\_  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot in PEM W-A015. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☒ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is met. Soils significantly disturbed by grazing.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania Sampling Date: 2024-08-20  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A039a  
Investigator(s): AC, LC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Terrace Local relief (concave, convex, none): Convex Slope (%): 2  
Subregion (LRR or MLRA): P 136 Lat: 36.7362576 Long: -79.4387803 Datum: NAD 83  
Soil Map Unit Name: 8A - Codorus-Comus complex, 0 to 2 percent slopes, frequently flooded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes _____ No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>	
Wetland Hydrology Present? Yes _____ No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PEM W-A017. The USACE Antecedent Precipitation Tool indicates wetter than normal conditions 3 months prior to survey.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-06  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A041  
Investigator(s): W. Jackson, C. Jerrett Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.788059 Long: -79.384373 Datum: NAD 83  
Soil Map Unit Name: 5C3 - Clifford sandy clay loam, 7 to 15 percent slopes, severely eroded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No \_\_\_\_\_  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	Is the Sampled Area within a Wetland?	Yes <input checked="" type="checkbox"/>	No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____			
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____			

Remarks:

Wetland sample plot within PFO W-A019. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

## HYDROLOGY

-								
-								
-								

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☒ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is met.

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-06  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A044  
Investigator(s): W. Jackson, C. Jerrett Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Convex Slope (%): 2  
Subregion (LRR or MLRA): P 136 Lat: 36.773222 Long: -79.399672 Datum: NAD 83  
Soil Map Unit Name: 8A - Codorus-Comus complex, 0 to 2 percent slopes, frequently flooded NWI classification: PFO1A

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No \_\_\_\_\_  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No _____	Is the Sampled Area within a Wetland? Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>	
Wetland Hydrology Present? Yes <input checked="" type="checkbox"/> No _____	

Remarks:

Upland sample plot adjacent to PFO W-A020. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-06  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A046  
Investigator(s): W. Jackson, C. Jerrett Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Slope Local relief (concave, convex, none): Convex Slope (%): 3  
Subregion (LRR or MLRA): P 136 Lat: 36.772711 Long: -79.399676 Datum: NAD 83  
Soil Map Unit Name: 8A - Codorus-Comus complex, 0 to 2 percent slopes, frequently flooded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No \_\_\_\_\_  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes _____	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes _____	No <input checked="" type="checkbox"/>			
Wetland Hydrology Present?	Yes _____	No <input checked="" type="checkbox"/>			

Remarks:

Upland sample plot adjacent to PFO W-A021. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

## SOIL

Sampling Point: SP-A047

[illegible]

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-06  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A049  
Investigator(s): W. Jackson, C. Jerrett Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.771891 Long: -79.400291 Datum: NAD 83  
Soil Map Unit Name: 8A - Codorus-Comus complex, 0 to 2 percent slopes, frequently flooded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot in PFO W-A023. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Significant rainfall event within the past 24 hours.

### HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)

-								

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

## Hydric Soil Indicators:

- ☐ Histosol (A1)  
☐ Histic Epipedon (A2)  
☐ Black Histic (A3)  
☐ Hydrogen Sulfide (A4)  
☐ Stratified Layers (A5)  
☐ 2 cm Muck (A10) (**LRR N**)  
☐ Depleted Below Dark Surface (A11)  
☐ Thick Dark Surface (A12)  
☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)  
☐ Sandy Gleyed Matrix (S4)  
☐ Sandy Redox (S5)  
☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)  
☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)  
☐ Thin Dark Surface (S9) (**MLRA 147, 148**)  
☐ Loamy Gleyed Matrix (F2)  
☐ Depleted Matrix (F3)  
☐ Redox Dark Surface (F6)  
☐ Depleted Dark Surface (F7)  
☐ Redox Depressions (F8)  
☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)  
☐ Umbric Surface (F13) (**MLRA 136, 122**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)  
☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)  
☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)  
☐ Very Shallow Dark Surface (TF12)  
☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

## Restrictive Layer (if observed):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes \_\_\_\_\_ No ☒

Remarks:

No indicators are met.

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

### Field Observations:

Surface Water Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_  
Water Table Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_  
Saturation Present? Yes ☒ No \_\_\_\_\_ Depth (inches): 0  
(includes capillary fringe)

Wetland Hydrology Present? Yes ☒ No \_\_\_\_\_

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Indicators D2 and D5 are present. Saturation present at soil surface, however, no water table was present. Significant rainfall event in the past 24 hours, hydrology naturally problematic.

**Definitions of Four Vegetation Strata:**  
  
**Tree** – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
  
**Sapling/Shrub** – Woody plants, excluding vines, less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.  
  
**Herb** – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
  
**Woody vine** – All woody vines greater than 3.28 ft in height.

**Hydrophytic Vegetation Present?**      Yes ☒      No \_\_\_\_\_

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-07  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A056  
Investigator(s): W. Jackson, C. Jerrett Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Drainageway Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.746172 Long: -79.429973 Datum: NAD 83  
Soil Map Unit Name: 21E - Poplar Forest fine sandy loam, 25 to 45 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology ☒ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot in PEM W-A026. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Significant rainfall event within the past 24 hours, hydrology naturally problematic.

Landform (hillslope, terrace, etc.): Slope Local relief (concave, convex, none): Convex Slope (%): 3  
Subregion (LRR or MLRA): P 136 Lat: 36.75348 Long: -79.423245 Datum: NAD 83  
Soil Map Unit Name: 5C3 - Clifford sandy clay loam, 7 to 15 percent slopes, severely eroded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil ☒, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes _____ No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>	
Wetland Hydrology Present? Yes _____ No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PEM W-A027. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Significant rainfall event within past 24 hours. Vegetation, soil, and hydrology significantly disturbed by natural gas pipeline right-of-way.

-								
-								
-								
-								
-								

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: Compaction  
Depth (inches): 12+

Hydric Soil Present? Yes ☐ No ☒

Remarks:

No indicators are present. Excavation beyond 12 inches prevented by compaction. Though a layer meeting the color requirements of indicator F3 (Depleted Matrix) is present, whether it met the depth requirements (6 inches) could not be assessed due to soil compaction. Due to the lack of hydrology indicators and dominance of wetland vegetation, the subject area is deemed to be non-wetland.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-07  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A061  
Investigator(s): W. Jackson, C. Jerrett Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.734608 Long: -79.440419 Datum: NAD 83  
Soil Map Unit Name: 8A - Codorus-Comus complex, 0 to 2 percent slopes, frequently flooded NWI classification: PEM1A

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology ☒ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot in PFO W-A028. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Significant rainfall event in the past 24 hours, hydrology naturally problematic.

## HYDROLOGY

<b>Hydrophytic Vegetation Present?</b> Yes <input checked="" type="checkbox"/> No _____																		

**Hydrophytic Vegetation Indicators:**

\_\_\_ 1 - Rapid Test for Hydrophytic Vegetation

☒ 2 - Dominance Test is >50%

☒ 3 - Prevalence Index is ≤3.0<sup>1</sup>

\_\_\_ 4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)

\_\_\_ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)

<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**

**Tree** – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

**Sapling/Shrub** – Woody plants, excluding vines, less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

**Herb** – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

**Woody vine** – All woody vines greater than 3.28 ft in height.

**Hydrophytic Vegetation Present?**

Yes ☒ No \_\_\_\_\_

Remarks: (Include photo numbers here or on a separate sheet.)

**Dominance test and prevalence index are met.**

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-10  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A068  
Investigator(s): W. Jackson, M. Chin Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.72075 Long: -79.454958 Datum: NAD 83  
Soil Map Unit Name: 11C3 - Minnieville clay loam, 7 to 15 percent slopes, severely eroded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology ☒ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot in PFO W-A031. The USACE Antecedent Precipitation tool indicates drier than normal conditions were present 3 months prior to survey. Hydrology naturally problematic.

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes _____	No <input checked="" type="checkbox"/>	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

### Remarks:

Upland sample plot adjacent to PFO W-A031. The USACE Antecedent Precipitation Tool indicates drier than normal conditions were present 3 months prior to survey, hydrology naturally problematic. Soils naturally problematic due to position in active floodplain. Though hydrology indicators are present and soils are problematic, the area in question should not be considered wetland due to the fact that the subject area is located on a convex sandbar, and that the only hydrology indicators present are likely from abnormal flood events.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-10  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A071  
Investigator(s): W. Jackson, M. Chin Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.720287 Long: -79.455256 Datum: NAD 83  
Soil Map Unit Name: 21D - Poplar Forest fine sandy loam, 15 to 25 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology ☒ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot in PFO W-A033. The USACE Antecedent Precipitation Tool indicates drier than normal conditions were present 3 months prior to survey, hydrology naturally problematic.

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☒ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is met.

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania Sampling Date: 2024-06-11  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A082  
Investigator(s): WJ, MC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Terrace Local relief (concave, convex, none): Convex Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.7041345 Long: -79.47008194 Datum: NAD 83  
Soil Map Unit Name: 21D - Poplar Forest fine sandy loam, 15 to 25 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No \_\_\_\_\_  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No <input checked="" type="checkbox"/>	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes _____	No <input checked="" type="checkbox"/>	
Wetland Hydrology Present?	Yes _____	No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PSS W-A038. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

## SOIL

Sampling Point: SP-A084

[illegible]

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania Sampling Date: 2024-06-11  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A085  
Investigator(s): WJ, MC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Drainageway Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.70145722 Long: -79.47345909 Datum: NAD 83  
Soil Map Unit Name: 21D - Poplar Forest fine sandy loam, 15 to 25 percent slopes NWI classification: R4SBC

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil ☒, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within PEM W-A040. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Vegetation, soil, and hydrology significantly disturbed by natural gas pipeline right-of-way. No soils sampled due to sample plot location in gas right-of-way.

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)	
Primary Indicators (minimum of one is required; check all that apply)			
<input type="checkbox"/> Surface Water (A1)	<input type="checkbox"/> True Aquatic Plants (B14)	<input type="checkbox"/> Surface Soil Cracks (B6)	
<input type="checkbox"/> High Water Table (A2)	<input type="checkbox"/> Hydrogen Sulfide Odor (C1)	<input type="checkbox"/> Sparsely Vegetated Concave Surface (B8)	
<input type="checkbox"/> Saturation (A3)	<input type="checkbox"/> Oxidized Rhizospheres on Living Roots (C3)	<input type="checkbox"/> Drainage Patterns (B10)	
<input type="checkbox"/> Water Marks (B1)	<input type="checkbox"/> Presence of Reduced Iron (C4)	<input type="checkbox"/> Moss Trim Lines (B16)	
<input type="checkbox"/> Sediment Deposits (B2)	<input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C6)	<input type="checkbox"/> Dry-Season Water Table (C2)	
<input type="checkbox"/> Drift Deposits (B3)	<input type="checkbox"/> Thin Muck Surface (C7)	<input type="checkbox"/> Crayfish Burrows (C8)	
<input type="checkbox"/> Algal Mat or Crust (B4)	<input type="checkbox"/> Other (Explain in Remarks)	<input type="checkbox"/> Saturation Visible on Aerial Imagery (C9)	
<input type="checkbox"/> Iron Deposits (B5)		<input type="checkbox"/> Stunted or Stressed Plants (D1)	
<input type="checkbox"/> Inundation Visible on Aerial Imagery (B7)		<input checked="" type="checkbox"/> Geomorphic Position (D2)	
<input type="checkbox"/> Water-Stained Leaves (B9)		<input type="checkbox"/> Shallow Aquitard (D3)	
<input type="checkbox"/> Aquatic Fauna (B13)		<input type="checkbox"/> Microtopographic Relief (D4)	
		<input checked="" type="checkbox"/> FAC-Neutral Test (D5)	

<b>Field Observations:</b>		<b>Wetland Hydrology Present?</b> Yes <input checked="" type="checkbox"/> No _____
Surface Water Present?	Yes _____ No <input checked="" type="checkbox"/> Depth (inches): _____	
Water Table Present?	Yes _____ No <input checked="" type="checkbox"/> Depth (inches): _____	
Saturation Present? (includes capillary fringe)	Yes _____ No <input checked="" type="checkbox"/> Depth (inches): _____	

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Indicators D2 and D5 are present. Hydrology significantly disturbed by natural gas pipeline right-of-way.

**VEGETATION (Four Strata) – Use scientific names of plants.**

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-08-20  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A086a  
Investigator(s): WJ, MC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Slope Local relief (concave, convex, none): Concave Slope (%): 3  
Subregion (LRR or MLRA): P 136 Lat: 36.701753 Long: -79.473407 Datum: NAD 83  
Soil Map Unit Name: 21D - Poplar Forest fine sandy loam, 15 to 25 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil ☒, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No _____	Is the Sampled Area within a Wetland? Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>	
Wetland Hydrology Present? Yes _____ No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PEM W-A040. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Vegetation, soil, and hydrology significantly disturbed by natural gas pipeline right-of-way.

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)  
☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)  
☐ Very Shallow Dark Surface (TF12)  
☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

## Restrictive Layer (if observed):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes \_\_\_\_\_ No ☒

Remarks:

No indicators are present.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-11  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A089  
Investigator(s): WJ, MC Section, Township, Range: \_\_\_\_\_

Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.688874 Long: -79.486261 Datum: NAD 83  
Soil Map Unit Name: 8A - Codorus-Comus complex, 0 to 2 percent slopes, frequently flooded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil ☒, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within PEM W-A042 and representative of PEM W-A043. Soils naturally problematic due to position in active floodplain, but are considered hydric due to presence of hydrophytic vegetation and hydrology. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (LRR N)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (LRR N, MLRA 147, 148)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (MLRA 147, 148)
- ☐ Thin Dark Surface (S9) (MLRA 147, 148)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (LRR N, MLRA 136)
- ☐ Umbric Surface (F13) (MLRA 136, 122)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 148)
- ☐ Red Parent Material (F21) (MLRA 127, 147)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (MLRA 147)
- ☐ Coast Prairie Redox (A16) (MLRA 147, 148)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 136, 147)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: Coarse fragments  
Depth (inches): 6

Hydric Soil Present? Yes ☐ No ☒

Remarks:

No indicators are present. Excavation beyond 6 inches prevented by gravel. Soils assumed non-hydric below restrictive layer due to infiltration through gravel layer and due to stream channel erosion disconnecting this area from the active floodplain.

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania Sampling Date: 2024-06-12  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A091  
Investigator(s): WJ, MC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Concave Slope (%): 1  
Subregion (LRR or MLRA): P 136 Lat: 36.68034741 Long: -79.4901509 Datum: NAD 83  
Soil Map Unit Name: 8A - Codorus-Comus complex, 0 to 2 percent slopes, frequently flooded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No \_\_\_\_\_  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot in PFO W-A045, representative of PFO W-A044. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania Sampling Date: 2024-06-12  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A095  
Investigator(s): WJ, MC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Drainageway Local relief (concave, convex, none): Concave Slope (%): 2  
Subregion (LRR or MLRA): P 136 Lat: 36.67198146 Long: -79.49893736 Datum: NAD 83  
Soil Map Unit Name: 8A - Codorus-Comus complex, 0 to 2 percent slopes, frequently flooded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No \_\_\_\_\_  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within PEM W-A047. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)	
Primary Indicators (minimum of one is required; check all that apply)

## Hydric Soil Indicators:

- ☐ Histosol (A1)  
☐ Histic Epipedon (A2)  
☐ Black Histic (A3)  
☐ Hydrogen Sulfide (A4)  
☐ Stratified Layers (A5)  
☐ 2 cm Muck (A10) (**LRR N**)  
☐ Depleted Below Dark Surface (A11)  
☐ Thick Dark Surface (A12)  
☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)  
☐ Sandy Gleyed Matrix (S4)  
☐ Sandy Redox (S5)  
☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)  
☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)  
☐ Thin Dark Surface (S9) (**MLRA 147, 148**)  
☐ Loamy Gleyed Matrix (F2)  
☒ Depleted Matrix (F3)  
☐ Redox Dark Surface (F6)  
☐ Depleted Dark Surface (F7)  
☐ Redox Depressions (F8)  
☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)  
☐ Umbric Surface (F13) (**MLRA 136, 122**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)  
☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)  
☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)  
☐ Very Shallow Dark Surface (TF12)  
☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

## Restrictive Layer (if observed):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is present.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania County Sampling Date: 2024-06-12  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A099  
Investigator(s): WJ, MC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Slope Local relief (concave, convex, none): Concave Slope (%): 2  
Subregion (LRR or MLRA): P 136 Lat: 36.668137 Long: -79.506507 Datum: NAD 83  
Soil Map Unit Name: 9C - Lackstown fine sandy loam, 7 to 15 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No \_\_\_\_\_  
Are Vegetation \_\_\_\_\_, Soil ☒, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No <input checked="" type="checkbox"/>	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes _____	No <input checked="" type="checkbox"/>	
Wetland Hydrology Present?	Yes _____	No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PEM W-A048. Soils naturally problematic due to position in active floodplain. Soils not considered hydric due to lack of hydrology and lack of dominant hydrophytic vegetation. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

## Hydric Soil Indicators:

- ☐ Histosol (A1)  
☐ Histic Epipedon (A2)  
☐ Black Histic (A3)  
☐ Hydrogen Sulfide (A4)  
☐ Stratified Layers (A5)  
☐ 2 cm Muck (A10) (**LRR N**)  
☐ Depleted Below Dark Surface (A11)  
☐ Thick Dark Surface (A12)  
☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)  
☐ Sandy Gleyed Matrix (S4)  
☐ Sandy Redox (S5)  
☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)  
☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)  
☐ Thin Dark Surface (S9) (**MLRA 147, 148**)  
☐ Loamy Gleyed Matrix (F2)  
☒ Depleted Matrix (F3)  
☐ Redox Dark Surface (F6)  
☐ Depleted Dark Surface (F7)  
☐ Redox Depressions (F8)  
☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)  
☐ Umbric Surface (F13) (**MLRA 136, 122**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)  
☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)  
☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)  
☐ Very Shallow Dark Surface (TF12)  
☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

## Restrictive Layer (if observed):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is present.

## WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania Sampling Date: 2024-06-12  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A101  
Investigator(s): WJ, MC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Slope Local relief (concave, convex, none): Convex Slope (%): 2  
Subregion (LRR or MLRA): P 136 Lat: 36.67371781 Long: -79.50130223 Datum: NAD 83  
Soil Map Unit Name: 5C3 - Clifford sandy clay loam, 7 to 15 percent slopes, severely eroded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No \_\_\_\_\_  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No <input checked="" type="checkbox"/>	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes _____	No <input checked="" type="checkbox"/>	
Wetland Hydrology Present?	Yes _____	No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PFO W-A049a. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot in PEM W-A049b. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Vegetation, soil, and hydrology significantly disturbed by natural gas pipeline right-of-way. No soil sample was taken due to sample plot location in gas pipeline right-of-way.

- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☒ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: Compaction  
Depth (inches): 10+

Hydric Soil Present? Yes ☒ No ☐

Remarks:

No indicators are present. excavation beyond 10 inches prevented by compaction. A depleted layer meeting the color requirements of Indicator F3 is present beginning at a depth of 8 inches, however, due to soil compaction, the depth of this layer could not be fully assessed. Due to the presence of wetland hydrology indicators and dominance of hydrophytic vegetation, the soils are assumed to satisfy wetland criteria below the compacted layer.

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

## Hydric Soil Indicators:

- ☐ Histosol (A1)  
☐ Histic Epipedon (A2)  
☐ Black Histic (A3)  
☐ Hydrogen Sulfide (A4)  
☐ Stratified Layers (A5)  
☐ 2 cm Muck (A10) (**LRR N**)  
☐ Depleted Below Dark Surface (A11)  
☐ Thick Dark Surface (A12)  
☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)  
☐ Sandy Gleyed Matrix (S4)  
☐ Sandy Redox (S5)  
☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)  
☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)  
☐ Thin Dark Surface (S9) (**MLRA 147, 148**)  
☐ Loamy Gleyed Matrix (F2)  
☒ Depleted Matrix (F3)  
☐ Redox Dark Surface (F6)  
☐ Depleted Dark Surface (F7)  
☐ Redox Depressions (F8)  
☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)  
☐ Umbric Surface (F13) (**MLRA 136, 122**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)  
☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)  
☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)  
☐ Very Shallow Dark Surface (TF12)  
☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

## Restrictive Layer (if observed):

Type: Coarse fragments  
 Depth (inches): 8+

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is met. Excavation below 8 inches prevented by coarse fragments in soil column.

**Definitions of Four Vegetation Strata:**  
  
**Tree** – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
  
**Sapling/Shrub** – Woody plants, excluding vines, less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.  
  
**Herb** – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
  
**Woody vine** – All woody vines greater than 3.28 ft in height.

**Hydrophytic Vegetation Present?**      Yes \_\_\_\_\_ No ☒

SOIL

Sampling Point: SP-A126

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

-								
-								
-								
-								

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (LRR N)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (LRR N, MLRA 147, 148)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (MLRA 147, 148)
- ☐ Thin Dark Surface (S9) (MLRA 147, 148)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (LRR N, MLRA 136)
- ☐ Umbric Surface (F13) (MLRA 136, 122)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 148)
- ☐ Red Parent Material (F21) (MLRA 127, 147)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (MLRA 147)
- ☐ Coast Prairie Redox (A16) (MLRA 147, 148)
- ☐ Piedmont Floodplain Soils (F19) (MLRA 136, 147)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: Coarse fragments  
Depth (inches): 10

Hydric Soil Present? Yes ☐ No ☒

Remarks:

No indicators are met. Excavation below 10 inches prevented by coarse fragments in soil column. Due to the lack of hydrologic indicators and dominance of hydrophytic vegetation, soils below the restrictive layer are assumed to be non-hydric.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate City/County: Pittsylvania County Sampling Date: 2024-06-17  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A127  
Investigator(s): WJ, CJ Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Berm Local relief (concave, convex, none): Convex Slope (%): 2  
Subregion (LRR or MLRA): P 136 Lat: 36.6255966 Long: -79.5505798 Datum: NAD 83  
Soil Map Unit Name: 23B - Clover fine sandy loam, 2 to 7 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology ☒ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="checkbox"/> No _____	Is the Sampled Area within a Wetland? Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>	
Wetland Hydrology Present? Yes _____ No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PFO W-A064. The USACE Antecedent Precipitation Tool indicates drier than normal conditions were present 3 months prior to survey.

## Hydric Soil Indicators:

- ☐ Histosol (A1)  
☐ Histic Epipedon (A2)  
☐ Black Histic (A3)  
☐ Hydrogen Sulfide (A4)  
☐ Stratified Layers (A5)  
☐ 2 cm Muck (A10) (**LRR N**)  
☐ Depleted Below Dark Surface (A11)  
☐ Thick Dark Surface (A12)  
☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)  
☐ Sandy Gleyed Matrix (S4)  
☐ Sandy Redox (S5)  
☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)  
☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)  
☐ Thin Dark Surface (S9) (**MLRA 147, 148**)  
☐ Loamy Gleyed Matrix (F2)  
☐ Depleted Matrix (F3)  
☐ Redox Dark Surface (F6)  
☐ Depleted Dark Surface (F7)  
☐ Redox Depressions (F8)  
☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)  
☐ Umbric Surface (F13) (**MLRA 136, 122**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)  
☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)  
☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)  
☐ Very Shallow Dark Surface (TF12)  
☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

## Restrictive Layer (if observed):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes \_\_\_\_\_ No ☒

Remarks:

No indicators are met.

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology ☒ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	Is the Sampled Area within a Wetland?	Yes <input checked="" type="checkbox"/>	No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____			
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____			

Remarks:

Wetland sample plot in PFO W-A069, representative of PFO W-A070c. The USACE Antecedent Precipitation Tool indicates drier than normal conditions were present 3 months prior to survey.

## HYDROLOGY

-								
-								
-								

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: Compaction  
Depth (inches): 12+

Hydric Soil Present? Yes ☐ No ☒

Remarks:

No indicators are met. Excavation beyond 12 inches was prevented by compacted clay. A layer with the color requirements (10YR 5/2) for Indicator F3 begins at 10 inches but the depth of this layer could not be determined due to compaction. However, due to the lack of wetland hydrology indicators and dominance of hydrophytic vegetation, even if Indicator F3 were met, the area would not meet wetland criteria Soils significantly disturbed by natural gas pipeline right-of-way.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

 \_\_\_ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
  
<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**  
  
**Tree** – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
  
**Sapling/Shrub** – Woody plants, excluding vines, less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.  
  
**Herb** – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
  
**Woody vine** – All woody vines greater than 3.28 ft in height.

**Hydrophytic Vegetation Present?**      Yes ✓      No \_\_\_\_\_

## Hydric Soil Indicators:

- ☐ Histosol (A1)  
☐ Histic Epipedon (A2)  
☐ Black Histic (A3)  
☐ Hydrogen Sulfide (A4)  
☐ Stratified Layers (A5)  
☐ 2 cm Muck (A10) (**LRR N**)  
☐ Depleted Below Dark Surface (A11)  
☐ Thick Dark Surface (A12)  
☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)  
☐ Sandy Gleyed Matrix (S4)  
☐ Sandy Redox (S5)  
☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)  
☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)  
☐ Thin Dark Surface (S9) (**MLRA 147, 148**)  
☐ Loamy Gleyed Matrix (F2)  
☐ Depleted Matrix (F3)  
☐ Redox Dark Surface (F6)  
☐ Depleted Dark Surface (F7)  
☐ Redox Depressions (F8)  
☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)  
☐ Umbric Surface (F13) (**MLRA 136, 122**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)  
☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)  
☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)  
☐ Very Shallow Dark Surface (TF12)  
☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

## Restrictive Layer (if observed):

Type: Compaction  
 Depth (inches): 12

Hydric Soil Present? Yes ☐ No ☒

Remarks:

No indicators are present.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

8 - 20	10YR 5/2	80	10YR 3/6	20	C	M	Sand	
-								
-								
-								
-								
-								
-								
-								
-								

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☒ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator S5 is present. Though a matrix with chroma value 2 or lower does not start within 6 inches of the soil surface, we propose that this was likely due to deposition considering the sample plot's location in a bench and the disturbance history of agriculture, silviculture, and other activity in the region.

**Hydrophytic Vegetation Indicators:**  
 \_\_\_ 1 - Rapid Test for Hydrophytic Vegetation  
☒ 2 - Dominance Test is >50%  
 \_\_\_ 3 - Prevalence Index is ≤3.0<sup>1</sup>  
 \_\_\_ 4 - Morphological Adaptations<sup>1</sup> (Provide supporting data in Remarks or on a separate sheet)  
 \_\_\_ Problematic Hydrophytic Vegetation<sup>1</sup> (Explain)  
  
<sup>1</sup>Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

**Definitions of Four Vegetation Strata:**  
  
**Tree** – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
  
**Sapling/Shrub** – Woody plants, excluding vines, less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.  
  
**Herb** – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
  
**Woody vine** – All woody vines greater than 3.28 ft in height.

**Hydrophytic Vegetation Present?**      Yes ☒      No \_\_\_\_\_

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania Sampling Date: 2024-08-26  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A155  
Investigator(s): PKM Section, Township, Range: \_\_\_\_\_

Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): Concave Slope (%): 2  
Subregion (LRR or MLRA): P 136 Lat: 36.77514026 Long: -79.39868905 Datum: NAD 83  
Soil Map Unit Name: 8A - Codorus-Comus complex, 0 to 2 percent slopes, frequently flooded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil ☒, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within PFO W-A073b. Soils naturally problematic due to position in active floodplain, but are considered hydric due to landscape position, and presence of hydrophytic vegetation and hydrology. The USACE Antecedent Precipitation Tool indicates wetter than normal conditions were present 3 months prior to survey.

-								

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

<sup>2</sup>Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ☐ Histosol (A1)
- ☐ Histic Epipedon (A2)
- ☐ Black Histic (A3)
- ☐ Hydrogen Sulfide (A4)
- ☐ Stratified Layers (A5)
- ☐ 2 cm Muck (A10) (**LRR N**)
- ☐ Depleted Below Dark Surface (A11)
- ☐ Thick Dark Surface (A12)
- ☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)
- ☐ Sandy Gleyed Matrix (S4)
- ☐ Sandy Redox (S5)
- ☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)
- ☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)
- ☐ Thin Dark Surface (S9) (**MLRA 147, 148**)
- ☐ Loamy Gleyed Matrix (F2)
- ☐ Depleted Matrix (F3)
- ☐ Redox Dark Surface (F6)
- ☐ Depleted Dark Surface (F7)
- ☐ Redox Depressions (F8)
- ☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)
- ☐ Umbric Surface (F13) (**MLRA 136, 122**)
- ☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)
- ☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)
- ☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)
- ☒ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)
- ☐ Very Shallow Dark Surface (TF12)
- ☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Soils naturally problematic due to position in active floodplain, but are considered hydric due to landscape position, and presence of hydrophytic vegetation and hydrology.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project City/County: Pittsylvania Sampling Date: 2024-08-26  
Applicant/Owner: Mountain Valley Pipeline, LLC State: Virginia Sampling Point: SP-A156  
Investigator(s): PKM Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Slope Local relief (concave, convex, none): Convex Slope (%): 3  
Subregion (LRR or MLRA): P 136 Lat: 36.77529901 Long: -79.39862578 Datum: NAD 83  
Soil Map Unit Name: 8A - Codorus-Comus complex, 0 to 2 percent slopes, frequently flooded NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes _____ No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>	
Wetland Hydrology Present? Yes _____ No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PFO W-A073b. The USACE Antecedent Precipitation Tool indicates wetter than normal conditions were present 3 months prior to survey.

**Definitions of Four Vegetation Strata:**  
  
**Tree** – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.  
  
**Sapling/Shrub** – Woody plants, excluding vines, less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.  
  
**Herb** – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.  
  
**Woody vine** – All woody vines greater than 3.28 ft in height.

**Hydrophytic Vegetation Present?**      Yes ☒      No \_\_\_\_\_

_____ = Total Cover				<b>Hydrophytic Vegetation Present?</b> Yes <input checked="" type="checkbox"/> No _____														
50% of total cover: _____ 20% of total cover: _____																		

Remarks: (Include photo numbers here or on a separate sheet.)

Vegetation was not able to be observed or recorded at the time of the site visit due to high water conditions. With the presumed constant inundation of this area, hydrophytic vegetation can be assumed to be present at times when the water levels are lower and can be observed.

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No \_\_\_\_\_  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within PEM W-B013a. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. 0.04" of rain fell within the past 24 hours. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

## Hydric Soil Indicators:

- ☐ Histosol (A1)  
☐ Histic Epipedon (A2)  
☐ Black Histic (A3)  
☐ Hydrogen Sulfide (A4)  
☐ Stratified Layers (A5)  
☐ 2 cm Muck (A10) (**LRR N**)  
☐ Depleted Below Dark Surface (A11)  
☐ Thick Dark Surface (A12)  
☐ Sandy Mucky Mineral (S1) (**LRR N, MLRA 147, 148**)  
☐ Sandy Gleyed Matrix (S4)  
☐ Sandy Redox (S5)  
☐ Stripped Matrix (S6)

- ☐ Dark Surface (S7)  
☐ Polyvalue Below Surface (S8) (**MLRA 147, 148**)  
☐ Thin Dark Surface (S9) (**MLRA 147, 148**)  
☐ Loamy Gleyed Matrix (F2)  
☒ Depleted Matrix (F3)  
☐ Redox Dark Surface (F6)  
☐ Depleted Dark Surface (F7)  
☐ Redox Depressions (F8)  
☐ Iron-Manganese Masses (F12) (**LRR N, MLRA 136**)  
☐ Umbric Surface (F13) (**MLRA 136, 122**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 148**)  
☐ Red Parent Material (F21) (**MLRA 127, 147**)

Indicators for Problematic Hydric Soils<sup>3</sup>:

- ☐ 2 cm Muck (A10) (**MLRA 147**)  
☐ Coast Prairie Redox (A16) (**MLRA 147, 148**)  
☐ Piedmont Floodplain Soils (F19) (**MLRA 136, 147**)  
☐ Very Shallow Dark Surface (TF12)  
☐ Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

## Restrictive Layer (if observed):

Type: \_\_\_\_\_

Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes ☒ No ☐

Remarks:

Indicator F3 is present.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project NC City/County: Pittsylvania County Sampling Date: 2024-06-07  
Applicant/Owner: Mountain Valley Pipeline LLC State: Virginia Sampling Point: SP-B034  
Investigator(s): ES, LC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Slope Local relief (concave, convex, none): Convex Slope (%): 2-3  
Subregion (LRR or MLRA): P 136 Lat: 36.5525304 Long: -79.62176637 Datum: NAD 83  
Soil Map Unit Name: 23C - Clover fine sandy loam, 7 to 15 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes _____ No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland? Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present? Yes _____ No <input checked="" type="checkbox"/>	
Wetland Hydrology Present? Yes _____ No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PFO W-B015. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. 0.04" of rain fell within the past 24 hours. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

Investigator(s): ES, LC Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Terrace Local relief (concave, convex, none): None Slope (%): 0  
Subregion (LRR or MLRA): P 136 Lat: 36.551186 Long: -79.6156 Datum: NAD 83  
Soil Map Unit Name: 23C - Clover fine sandy loam, 7 to 15 percent slopes NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No \_\_\_\_\_ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes _____	No <input checked="" type="checkbox"/>	
Wetland Hydrology Present?	Yes _____	No <input checked="" type="checkbox"/>	

Remarks:

Upland sample plot adjacent to PFO W-B016. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. 0.04" of rain fell within the past 24 hours. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

#### Remarks:

Wetland sample plot within PEM W-B017. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. Area contains relict logging debris, disturbing hydrology by causing water to accumulate and causing an upland berm within the wetland. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology ☒ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes _____ No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes _____	No <input checked="" type="checkbox"/>	

### Remarks:

Upland sample plot adjacent to PEM W-B017. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. Area contains relict logging debris, disturbing hydrology by causing water to accumulate and causing an upland berm within the wetland. While problematic, hydrology not considered to meet due to lack of geomorphic position on a 1-meter rise above the wetland. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

### SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within PFO W-B018. Vegetation and hydrology disturbed by active construction for adjacent water utility pipeline. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey. Survey Point was revisited on 01/08/25 and site hydrology was adjusted. Site was originally sampled on 6/10/24.

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes _____	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____			
Wetland Hydrology Present?	Yes _____	No <input checked="" type="checkbox"/>			

### Remarks:

Upland sample plot adjacent to PFO W-B018. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. While problematic, hydrology not considered to meet due to lack of geomorphic position on a 1-meter rise above the wetland. Vegetation, while problematic, would likely not meet criteria in the absence of logging debris, which artificially raises the water table by not allowing water to penetrate the ground at a typical rate. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

### Field Observations:

Surface Water Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_  
Water Table Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_  
Saturation Present? Yes \_\_\_\_\_ No ☒ Depth (inches): \_\_\_\_\_  
(includes capillary fringe)

Wetland Hydrology Present? Yes \_\_\_\_\_ No ☒

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

No indicators are present.

# WETLAND DETERMINATION DATA FORM – Eastern Mountains and Piedmont Region

Project/Site: MVP Southgate Project NC City/County: Pittsylvania County Sampling Date: 2024-06-11  
Applicant/Owner: Mountain Valley Pipeline LLC State: Virginia Sampling Point: SP-B043  
Investigator(s): ES, LC, PM Section, Township, Range: \_\_\_\_\_  
Landform (hillslope, terrace, etc.): Hillslope Local relief (concave, convex, none): Concave Slope (%): 5  
Subregion (LRR or MLRA): P 136 Lat: 36.56552447 Long: -79.6135057 Datum: NAD 83  
Soil Map Unit Name: 29C - Pinkston-Clover complex, 7 to 15 percent slopes, very stony NWI classification: \_\_\_\_\_

Are climatic / hydrologic conditions on the site typical for this time of year? Yes \_\_\_\_\_ No ☒ (If no, explain in Remarks.)  
Are Vegetation ☒, Soil \_\_\_\_\_, or Hydrology ☒ significantly disturbed? Are "Normal Circumstances" present? Yes \_\_\_\_\_ No ☒  
Are Vegetation \_\_\_\_\_, Soil \_\_\_\_\_, or Hydrology \_\_\_\_\_ naturally problematic? (If needed, explain any answers in Remarks.)

## SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/>	No _____	<b>Is the Sampled Area within a Wetland?</b> Yes <input checked="" type="checkbox"/> No _____
Hydric Soil Present?	Yes <input checked="" type="checkbox"/>	No _____	
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/>	No _____	

Remarks:

Wetland sample plot within PSS W-B020. Vegetation and hydrology significantly disturbed by natural gas pipeline right-of-way. Year-old logging debris disturbed hydrology in hillside drainageway. The USACE Antecedent Precipitation Tool indicates normal conditions were present 3 months prior to survey.

## HYDROLOGY

Wetland Hydrology Indicators:		Secondary Indicators (minimum of two required)	
Primary Indicators (minimum of one is required; check all that apply)			
<input type="checkbox"/> Surface Water (A1)	<input type="checkbox"/> True Aquatic Plants (B14)	<input type="checkbox"/> Surface Soil Cracks (B6)	
<input type="checkbox"/> High Water Table (A2)	<input type="checkbox"/> Hydrogen Sulfide Odor (C1)	<input type="checkbox"/> Sparsely Vegetated Concave Surface (B8)	
<input type="checkbox"/> Saturation (A3)	<input type="checkbox"/> Oxidized Rhizospheres on Living Roots (C3)	<input type="checkbox"/> Drainage Patterns (B10)	
<input type="checkbox"/> Water Marks (B1)	<input type="checkbox"/> Presence of Reduced Iron (C4)	<input type="checkbox"/> Moss Trim Lines (B16)	
<input type="checkbox"/> Sediment Deposits (B2)	<input type="checkbox"/> Recent Iron Reduction in Tilled Soils (C6)	<input type="checkbox"/> Dry-Season Water Table (C2)	
<input type="checkbox"/> Drift Deposits (B3)	<input type="checkbox"/> Thin Muck Surface (C7)	<input type="checkbox"/> Crayfish Burrows (C8)	
<input type="checkbox"/> Algal Mat or Crust (B4)	<input type="checkbox"/> Other (Explain in Remarks)	<input type="checkbox"/> Saturation Visible on Aerial Imagery (C9)	
<input type="checkbox"/> Iron Deposits (B5)		<input type="checkbox"/> Stunted or Stressed Plants (D1)	
<input type="checkbox"/> Inundation Visible on Aerial Imagery (B7)		<input checked="" type="checkbox"/> Geomorphic Position (D2)	
<input type="checkbox"/> Water-Stained Leaves (B9)		<input type="checkbox"/> Shallow Aquitard (D3)	
<input type="checkbox"/> Aquatic Fauna (B13)		<input type="checkbox"/> Microtopographic Relief (D4)	
		<input checked="" type="checkbox"/> FAC-Neutral Test (D5)	

<b>Field Observations:</b>		<b>Wetland Hydrology Present?</b> Yes <input checked="" type="checkbox"/> No _____
